Rebooting Pedagogy and Education systems for the Twenty-first Century: Why we need course-corrections immediately Sujay Rao Mandavilli, 2024-04-09 Education is the fundamental pillar upon which any human civilization rests As a matter of fact no civilization in any meaningful form or degree has been possible in human history that has not been built on the bulwark and edifice of education While literacy may have been limited to the privileged few in early ancient civilizations it was these privileged few who controlled the masses and set the tempo for meaningful progress in such civilizations educational systems have proven to be the bedrock and foundational pillar upon which much of human accomplishment and achievement have rested too In spite of the naysayers the cynics and the pessimists education has expanded greatly in the

twentieth century while the worlds earliest civilizations were not western in the canonical sense of the term there is no denying that western civilizations have pulled away strongly since then Riding on the shoulders on ancient Greece western intellectualism has been the bulwark upon which the superstructure of modern civilization has been built Even as recently as the middle of the twentieth century the rest of the world as opposed to the west had a lot of catching up to do Thankfully and mercifully a lot has changed since then India in the 1950 s and 1960 s emphasized higher education but neglected universal primary education as evidenced by low primary school enrollments and a high rate of dropouts Since then programs and schemes such as the Sarva Siksha Abhiyan or education for all programs have increased primary school enrollment considerably India now comfortably stands on the threshold of universal adult literacy While the quantity of education has been augmented quality has often failed to keep pace The tenets and the essential doctrines forming a part and parcel of the foundational pillars of pedagogy and education are antiquated and are still steeped in the western experience What is worse is that is very little awareness on the issue of the need for change this must be the foundation of all meaningful change but alas that foundation has yet to be built In this book we draw upon our long list of papers on the social science particularly anthropological pedagogy and the sociology of science and propose the direction we believe pedagogy must take in the twenty first century This can be no one man army we invite other scholars to contribute in eminent measure We also believe that this i e a foundational assessment of the concepts of pedagogy must become one of the more important and vital movements of the twenty first century This work is also at the heart of our globalization of science movement as many if not most concepts in various fields of the social science are based on old and archaic western centric paradigms There is also an unnatural gap between various fields of social sciences and the non social sciences too just as careerism is rampant across disciplines and what we called institutional coherentism is lacking Scientists say however recent research has shown that Does that mean that old research was wrong Why was it wrong Was it due to the absence of data or was it methodological error Why do we go round and round without a meaningful long term direction Very little scholarship is driven by the absolute desire to do good to society As Thomas Paine once famously stated A body of men holding themselves accountable to nobody ought not to be trusted by anybody We have theories theories and only theories all driven by old fashioned careerism or academic rivalry and with limited explanatory power All this needs to change in the twenty first century and practical application of knowledge emphasized To quote C S Lewis Experience that most brutal of teachers But you learn my God do you learn Anand Mahindra and several other individuals have repeatedly called for a new world class education system in India and elsewhere but there is very little conceptual clarity on how we should go about creating one Let a million scholars bloom Let a million intellectuals bloom Let a million scientists social scientists included bloom in different parts of the world all in the twenty first century Why should we hold our tongue and suffer in silence Let intellectuals drive meaningful and productive change Let better education systems form the backbone of better societies Let there be a healthy

rivalry among nations to develop better and better education systems There is no need for only western nations to take the lead here Those who have better ideas can indeed leapfrog everyone else Those who think better and do better win A Cross-Cultural Theory of Voter Behavior Wojciech Cwalina, Andrzej Falkowski, Bruce I Newman, 2013-01-11 The rapid development of democracy and political freedoms has created new and sophisticated psychology based methods of influencing the way voters choose as well as political systems based on free market principles A Cross Cultural Theory of Voter Behavior uses advanced empirical testing to determine whether the behavior of voters in established and emerging democracies around the world is predictable The results of the testing suggest the theory is a ground breaking cross cultural model with theoretical and strategic global implications This unique book examines the many facets of political marketing and its direct relationship with the voter A comprehensive theory meticulously tested in the dynamic political waters of the U S and Europe this text bridges the latest theoretical developments in the emerging and advanced democracies A Cross Cultural Theory of Voter Behavior offers an innovative and seldom seen international perspective that integrates up to date literature in political science with advanced political marketing to provide readers with useable unified information In addition the text is replete with detailed references and illustrated with a wealth of informative tables and graphics to made pertinent data accessible and easily understood Some of the topics discussed in A Cross Cultural Theory of Voter Behavior include politics in an age of manufactured images partisanship and party identification candidate centered politics political cognition social categorization of politicians the role of advertising and emotion among others An ideal text for students academics and researchers the information presented in A Cross Cultural Theory of Voter Behavior is also a vital resource for political practitioners such as consultants candidates lobbyists political action committees fund raisers pollsters government officials ad specialists journalists public relations executives and congressional aides Issues in Person Perception Mark Cook, 2021-09-17 Life becomes difficult for the judges of others when they are presented with a number of facts about someone which all point in different directions or which point in no direction at all Originally published in 1984 this volume brings together research on four major issues involved in judging people the relationship between person perception and personality inference from multiple cues methodology of measuring accuracy of perception and selection for employment These issues are not only of increasing importance in the study of psychology today they are also of central relevance to social and business conduct This edited collection will be a valuable resource for the student of either **Peace, Politics, and Religion** Jeffrey Haynes, 2020-12-14 Relationships between peace politics and religion are often controversial and sometimes problematic Religion is a core source of identity for billions of people around the world and it is hardly surprising that sometimes it becomes involved in conflicts At the same time we can see religion involved not only in conflict It is also central to conflict resolution peace making and peacebuilding Religious involvement is often necessary to try to end hatred and differences frequently central to political conflicts especially but not only in the Global South Evidence shows that

religious leaders and faith based organisations can play constructive roles in helping to end violence and in some cases build peace via early warnings of conflict good offices once conflict has erupted as well as advocacy mediation and reconciliation The chapters of this book highlight that religion can encourage both conflict and peace through the activities of people individually and collectively imbued with religious ideas and ideals

The Problems of Genocide A. Dirk Moses,2021-02-04 Historically delineates the problems of genocide as a concept in relation to rival categories of mass violence

Echo Chambers of Conflict Jonathan Matusitz,Jonah Lynne,2025-10-20 This volume offers a detailed description of how media propaganda shapes public perception in conflict zones drawing on key communication theories like framing and agenda setting It analyzes disinformation campaigns by Hamas and Israel showing how psychological warfare plays out on social media platforms The book delves into polarization and radicalization emphasizing social media s role in exacerbating these processes and exploring how individuals especially youths are radicalized online through gradual stages of desensitization This discussion is expanded through an analysis of digital activism and the role of social media in facilitating global protest movements
