Track/Rear Suspension

This Track/Rear Suspension section has been organized in such a manner that it can be completed individually and efficiently. Each sub-section has the necessary: Removing, Disassembling, Cleaning and Inspecting, Assembling, and Installing procedures.

NOTE: Some photographs used in this section are used for clarity purposes only and are not designed to depict actual conditions.

Removing Skid Frame

NOTE: Many service procedures can be performed without removing the skid frame. (Always observe the note introducing each sub-section for this important information.)

1. Loosen the jam nut and two track rollers adjusting bolts.

Fig. 1-7

7

2. Place a support stand under the rear bumper, then while holding the frame bracket, remove the rear cap screws securing the skid frame to the chassis. Account for lock washers and flat washers.

NOTE: The support stand should hold the front/skid frame but not raised off the floor.

3. Remove the front cap screws securing the skid frame to the chassis. Account for a flat washer and a lock washer.
4. Remove the support stand, then tip the front/skid frame rearward using a piece of cardboard to protect against scratching. Remove the skid frame.

Fig. 1-8

Wear Strips

REMOVAL

NOTE: It is possible to remove and install a wear strip without removing the skid frame. To do this, remove the machine screws and lock nut securing the wear strip at the front of the skid rail, then align the wear strip with openings (notches) in the track and drive it rearward off the skid rail. Apply two thumbprongs pressure to the rear wear strip and skid rail, then align the wear strip with openings (notches) in the track and drive it forward into the skid rail. Secure with the machine screws and lock nut.

NOTE: The skid frame should be removed for this procedure (see Removing Skid Frame in this section).

1. Remove the machine screws and lock nut securing the wear strip to the front of the skid rail.

Fig. 1-9

2. Using a pipe wrench and starting from either end, bend the edge of the wear strip with the pipe wrench pin and twist the wear strip off the skid rail. Move the pipe wrench 7.5-in. (19-cm) and again twist the wear strip off the rail. Repeat this procedure until the wear strip is free of the rail.

Fig. 1-10

NOTE: The wear strip can also be driven off the skid rail, however, it is quicker to use a pipe wrench.

Fig. 1-11

CLEANING AND INSPECTING

NOTE: Whenever a part is worn excessively, cracked, or damaged in any way, replacement is necessary.

1. Clean the skid rail using parts-cleaning solvent and compressed air.

WARNING

Always wear an approved pair of safety glasses when using compressed air.

2. Inspect the skid rail for cracks. If any cracks are found, replace the skid rail.
