Non Euclidean Geometry Stefan Kulczycki:

Non-Euclidean Geometry Stefan Kulczycki,2012-07-06 This accessible approach features stereometric and planimetric proofs and elementary proofs employing only the simplest properties of the plane A short history of geometry precedes the systematic exposition 1961 edition *Canadian Mathematical Bulletin* ,1978-12 *The Last Recreations* Martin Gardner,2020-10-06 Martin Gardner s Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists Gardner in his crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him These columns were both a revelation and a gift when he wrote them no one before Gardner had written about mathematics like this They continue to be a marvel This is the original 1997 edition and contains columns published from 1980 1986 *Canadian Mathematical Bulletin* ,1963 Fictive Narrative Philosophy Michael Boylan,2018-10-17 What is the philosophical voice within literature Does literature have a voice of its own Can this voice really be philosophical in its own right In this book Michael Boylan argues that some literary works indeed can make their own unique claims in different areas of philosophy He calls this method fictive narrative philosophy The first part of the book presents an overview of traditional thinking about philosophy and literature across classical modern and contemporary periods It does not seek to denigrate these methods of studying literature but rather to ask more of them The second part then sets out a rigorous definition of what constitutes fictive narrative philosophy This definition outlines detailed conceptions of the methods of presentation audience engagement logical mechanics and constructional devices of fictive narrative philosophy The author brings this definition to bear on individual authors and works that can be considered prime examples of fictive narrative philosophy Finally the book sets out why and when fictive narratives might be more favorable than traditional philosophical discourse and how the concept of fictive narrative philosophy can move teaching and scholarship forward in a positive direction Fictive Narrative Philosophy presents an entirely new and unique approach in which literature can be a form of philosophy It will appeal to scholars and upper level students interested in philosophy and literature Nineteenth-Century Science A.S. Weber,2000-03-10 Nineteenth Century Science is a science anthology which provides over 30 selections from original 19th century scientific monographs textbooks and articles written by such authors as Charles Darwin Mary Somerville J W Goethe John Dalton Charles Lyell and Hermann von Helmholtz The volume surveys scientific discovery and thought from Jean Baptiste Lamarck s theory of evolution of 1809 to the isolation of radium by Marie and Pierre Curie in 1898 Each selection opens with a biographical introduction situating each scientist and discovery within the context of history and culture of the period Each entry is also followed by a list of further suggested reading on the topic A broad range of technical and popular material has been included from Mendeleev s detailed description of the periodic table to Faraday s highly accessible lecture for young people on the chemistry of a

burning candle The anthology will be of interest to the general reader who would like to explore in detail the scientific cultural and intellectual development of the nineteenth century as well as to students and teachers who specialize in the science literature history or sociology of the period The book provides examples from all the disciplines of western science chemistry physics medicine astronomy biology evolutionary theory etc The majority of the entries consist of complete unabridged journal articles or book chapters from original 19th century scientific texts

College Geometry Howard Whitley Eves, Howard Eves, 1995 College Geometry is divided into two parts Part I is a sequel to basic high school geometry and introduces the reader to some of the important modern extensions of elementary geometry extension that have largely entered into the mainstream of mathematics Part II treats notions of geometric structure that arose with the non Euclidean revolution in the first half of the nineteenth century

Non-euclidean Geometry Stefan Kulczycki, 2008 Canadian Mathematical Bulletin ,1963 *Canadian Mathematical Bulletin* ,1978-12 *Geometric Constructions* George E. Martin, 2012-12-06 Geometric constructions have been a popular part of mathematics throughout history The ancient Greeks made the subject an art which was enriched by the medieval Arabs but which required the algebra of the Renaissance for a thorough understanding Through coordinate geometry various geometric construction tools can be associated with various fields of real numbers This book is about these associations As specified by Plato the game is played with a ruler and compass The first chapter is informal and starts from scratch introducing all the geometric constructions from high school that have been forgotten or were never seen The second chapter formalizes Plato s game and examines problems from antiquity such as the impossibility of trisecting an arbitrary angle After that variations on Plato s theme are explored using only a ruler using only a compass using toothpicks using a ruler and dividers using a marked rule using a tomahawk and ending with a chapter on geometric constructions by paperfolding The author writes in a charming style and nicely intersperses history and philosophy within the mathematics He hopes that readers will learn a little geometry and a little algebra while enjoying the effort This is as much an algebra book as it is a geometry book Since all the algebra and all the geometry that are needed is developed within the text very little mathematical background is required to read this book This text has been class tested for several semesters with a master s level class for secondary teachers
