Resources in Education ,2000-10 The Goodwillie Tower and the EHP Sequence Mark Behrens,2012 The author studies the interaction between the EHP sequence and the Goodwillie tower of the identity evaluated at spheres at the prime 2 Both give rise to spectral sequences the EHP spectral sequence and the Goodwillie spectral sequence respectively which compute the unstable homotopy groups of spheres He relates the Goodwillie filtration to the P map and the Goodwillie differentials to the H map Furthermore he studies an iterated Atiyah Hirzebruch spectral sequence approach to the homotopy of the layers of the Goodwillie tower of the identity on spheres He shows that differentials in these spectral sequences give rise to differentials in the EHP spectral sequence He uses his theory to recompute the 2 primary unstable stems through the Toda range up to the 19 stem He also studies the homological behavior of the interaction between the EHP sequence and the Goodwillie tower of the identity This homological analysis involves the introduction of Dyer Lashof like operations associated to M Ching s operad structure on the derivatives of the identity These operations act on the mod 2 stable homology of the Goodwillie layers of any functor from spaces to spaces **Canadian Books in Print.
