

Let's apply this to a real-world mapping situation.

The school is located at (2,3) and your home is located at (5,8). How many units is the distance between your school and your house?

First start at the point (2,3) and then count the units up to your home. There are 5 units. Then move right and count the units. There are 3 units. Add the units together to get the total distance from the school to your house. There are  $5 + 3$  or 8 units.

Let's look at how this can be used algebraically in a different example.

You get paid \$2 each time you take out the garbage.

The point (1,2) represents taking the garbage out 1 time and earning a total of \$2.

The point (3,6) represents taking the garbage out 3 times and earning a total of \$6.

What does the 5 in the point (5,10) represent? That's right! Taking the garbage out 5 times.

What does the 10 in the point (5,10) represent? That's right! Earning a total of \$10.
