The team of contributors are experienced practitioners working directly with perioperative patients or in perioperative education. An original model for ethical practice is proposed. The Reid model is the first such ethical model to be proposed for the perioperative environment. Includes one of the only chapters in any perioperative book which specifically focuses on the care of the elderly. The research chapter encourages the use of evidence based practice and the development of perioperative research. The unique chapter on care of the mentally ill will support practitioners who are not qualified in psychiatry to care for mentally ill patients. This is an area where there is a great information deficit. Key points listed for each chapter. Sections have been completely revised from previous edition. Key subject areas now stand alone chapters rather than sections within much larger chapters. Creates ease of access for user. Change of editorship. Recognises the diversity of perioperative environments much more explicitly than previous edition.
