Using Children's Literature to Teach Problem Solving in Math Jeanne White,2016-08-05 Learn how children's literature can help K-5 students see the real-life applications of mathematical concepts. This user-friendly book shows how to use stories to engage students in building critical reasoning, abstract thinking, and communication skills, all while helping students understand the relevance of math in their everyday lives. Each chapter is dedicated to one of the eight Standards for Mathematical Practice and offers examples of children's literature that can be used to help students develop that practice. You'll find out how to encourage students to persevere in solving mathematical problems and use multiple approaches to find the answer. Help students reason abstractly with the aid of concrete objects and visuals. Guide students in constructing arguments to explain their reasoning and engage in critical discussion with their peers. Teach students to recognize mathematical patterns and use them to solve problems efficiently. And more. The book offers activities for beginners as well as for more advanced problem solvers. Each chapter also provides guidance for ELLs and students with special needs so no matter your classroom environment, you'll be able to use these strategies to make math class more dynamic, engaging, and fun.

Medical Education: Theory and Practice E-Book Tim Dornan, Karen V. Mann, Albert J. J. A. Scherpbier, John A. Spencer,2011-12-02 Medical Education: Theory and Practice is a new text linking the theory and the practice for graduate students and educators who want to go beyond the basics. The scholarship of medical education is, above all, a practice, but one that has a strong theoretical foundation. Neither theory nor practice stand still, and both are grounded in research. The novelty of this book lies

in its interweaving of practice theory innovation and research The book starts with a theorised contemporary overview of the field Next it explores the theoretical foundations of medical education in depth The remainder of the book reviews a whole a range of educational contexts processes and outcomes This work has been edited by a distinguished international team of medical educationalists and written by equally accomplished authors from across the globe representing a spectrum of disciplines This will be an invaluable text for all Masters Students in health professions education as well as PhD students and education researchers wanting a background to the discipline Educators and medical students will also find it a very useful resource Written by key figures in medical educational research combined with a strong editorial influence from the international editorial team The text has a strong evidence based approach that is fully cognisant of research methodology issues The book provides a scholarly explanation on the topic rather than aiming to say the last word Written throughout in a clear and comprehensible style The content is extensively referenced with additional suggestions for further reading

Posamentier,Gary Kose,Danielle Sauro Virgadamo,Kathleen Keefe-cooperman,2019-08-21 The art or skill of problem solving in mathematics is mostly relegated to the strategies one can use to solve problems in the field Although this book addresses that issue it delves deeply into the psychological aspects that affect successful problem solving Such topics as decision making judgment and reasoning as well as using memory effectively and a discussion of the thought processes that could help address certain problem solving situations Most books that address problem solving and mathematics focus on the various skills This book goes beyond that and investigates the psychological aspects to solving problems in mathematics

Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CACL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CACL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author s previous research thereby providing smooth continuity and an engaging flow that follows the progression of the

research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse *Mathematics in Middle and Secondary School* Alexander Karp, Nicholas Wasserman, 2014-11-01 The experience and knowledge acquired in teacher education courses should build important fundamentals for the future teaching of mathematics In particular experience in mathematical problem solving and in planning lessons devoted to problem solving is an essential component of teacher preparation This book develops a problem solving approach and is intended to be a text used in mathematics education courses or professional development for pre service or in service middle and secondary school teachers It can be used both in graduate and undergraduate courses in accordance with the focus of teacher preparation programs The content of the book is suited especially for those students who are further along in their mathematics education preparation as the text is more involved with mathematical ideas and problem solving and discusses some of the intricate pedagogical considerations that arise in teaching The text is written not as an introduction to mathematics education a first course but rather as a second or probably third course The book deals both with general methodology issues in mathematics education incorporating a problem solving approach Chapters 1-6 and with more concrete applications within the context of specific topics algebra geometry and discrete mathematics Chapters 7-13 The book provides opportunities for teachers to engage in authentic mathematical thinking The mathematical ideas under consideration build on specific middle and secondary school content while simultaneously pushing the teacher to consider more advanced topics as well as various connections across mathematical domains The book strives to preserve the spirit of discussion and at times even argument typical of collaborative work on a lesson plan Based on the accumulated experience of work with future and current teachers the book assumes that students have some background in lesson planning and extends their thinking further Specifically this book aims to provide a discussion of how a lesson plan is constructed including the ways in which problems are selected or invented rather than the compilation of prepared lesson plans This approach reflects the authors view that the process of searching for an answer is often more important than the formal result **Handbook of Item Response Theory** Wim J. van der Linden, 2017-12-15 Drawing on the work of internationally acclaimed experts in the field Handbook of Item Response Theory Volume 3 Applications presents applications of item response theory to practical testing problems While item response theory may be known primarily for its advances in theoretical modeling of responses to test items equal progress has been made in its providing innovative solutions to daily testing problems This third volume in a three volume set highlights the major

applications Specifically this volume covers applications to test item calibration item analysis model fit checking test score interpretation optimal test design adaptive testing standard setting and forensic analyses of response data It describes advances in testing in areas such as large scale educational assessment psychological testing health measurement and measurement of change In addition it extensively reviews computer programs available to run any of the models and applications in Volume One and Three Features Includes contributions from internationally acclaimed experts with a history of advancing applications of item response theory Provides extensive cross referencing and common notation across all chapters in this three volume set Underscores the importance of treating each application in a statistically rigorous way Reviews major computer programs for item response theory analyses and applications Wim J van der Linden is a distinguished scientist and director of research and innovation at Pacific Metrics Corporation Dr van der Linden is also a professor emeritus of measurement and data analysis at the University of Twente His research interests include test theory adaptive testing optimal test assembly parameter linking test equating and response time modeling as well as decision theory and its applications to problems of educational decision making
