Computer Forensics Robert C. Newman, 2007-03-09. Computer Forensics: Evidence Collection and Management examines cyber crime, E-commerce, and Internet activities that could be used to exploit the Internet, computers, and electronic devices. The book focuses on the numerous vulnerabilities and threats that are inherent on the Internet and networking environments and presents techniques and suggestions for corporate security personnel, investigators, and forensic examiners to successfully identify, retrieve, and protect valuable forensic evidence for litigation and prosecution. The book is divided into two major parts for easy reference. The first part explores various crimes, laws, policies, forensic tools, and the information needed to understand the underlying concepts of computer forensic investigations. The second part presents information relating to crime scene investigations and management, disk and file structure, laboratory construction and functions, and legal testimony. Separate chapters focus on investigations involving computer systems, e-mail, and wireless devices. Presenting information patterned after technical, legal, and managerial classes held by computer forensic professionals from Cyber Crime Summits held at Kennesaw State University in 2005 and 2006, this book is an invaluable resource for those who want to be both efficient and effective when conducting an investigation.

Cybercrime, Digital Forensic Readiness, and Financial Crime Investigation in Nigeria Robinson Tombari Sibe, Christian Kaunert, 2024-03-26. Nigeria has become one of the hotbeds of cybercrime since the liberalization of the telecommunication industry began in 1996. The scale and magnitude have been quite disturbing, not just for Nigeria but also for the international community, given the limitless boundaries of cybercrime. Like any other type of fraud, Internet fraud is

primarily driven by financial gains This book investigates the extent of the lack of digital forensic resources in Nigeria's financial crime agencies It is vital to have a proper resource inventory and capabilities to successfully confront the growing threat of financial crimes While a few studies have suggested the lack of forensic capabilities in Nigerian cybercrime investigative agencies and the justice system none have examined this in great detail particularly in relation to specific skills gaps and resources needed in Nigeria's financial crime agencies This book contributes to the growing body of knowledge and clarifies the scope of the lack of digital forensic resources Understanding the extent of the deficiency and its impact on caseloads could be crucial for developing a roadmap toward building forensic readiness and capability maturity for the agencies This book presents the deficiencies in forensic readiness and recommends measures to fill this gap This book also examines the specifics of the cybercrime caseloads and conviction records in Nigeria identifying trends and patterns The book explores other cybercrime complexities in Nigeria such as common cybercrime taxonomies prosecution and conviction dynamics juxtaposing it with select case studies in other jurisdictions Drawing on extensive research the book offers crucial insights for policymakers researchers and the public interested in new trends in cybercrime digital forensic readiness Nigerian financial crime agencies and cybercrime investigations

The Forensic Science Service Great Britain: Parliament: House of Commons: Science and Technology Committee, 2011-07 The Science and Technology Committee is not confident that an orderly transition can be achieved by the extremely challenging deadline for closure of the Forensic Science Service of March 2012 Extending the deadline by at least six months would allow the government to consult on and determine a wider strategy for forensic science In making its decision to close the FSS the government failed to give enough consideration to the impact on forensic science research and development the capacity of private providers to absorb the FSS's 60% market share and the wider implications for the criminal justice system These considerations appear to have been hastily overlooked in favour of the financial bottom line The report also draws attention to the historical inadequacies in government decision making that brought the FSS to its current financial situation The FSS's dire financial position appears to have arisen from a complex combination of factors principally the shrinking forensics market driven by increasing police in sourcing of forensic science services and a forensic procurement framework that has driven down prices and does not adequately recognise the value of complex forensic services In the transition to closure transferring work from the FSS to a non accredited police or private laboratory would be highly undesirable posing significant and unacceptable risks to criminal justice Proposals should be brought forward immediately to provide the Forensic Science Regulator with statutory powers to enforce compliance with quality standards

Congress. Senate. Committee on Commerce, Science, and Transportation, 2013 Environmental Forensics R E Hester, R M Harrison, 2008-06-27 Environmental forensics is a combination of analytical and environmental chemistry which is useful in the court room context It therefore involves field analytical studies and both data interpretation and modelling connected with the attribution of pollution events to their causes Recent decades have seen a burgeoning of legislation designed to protect the environment and as the costs of environmental damage and clean up are considerable not only are there prosecutions by regulatory agencies but the courts are also used as a means of adjudication of civil damage claims relating to environmental causes or environmental degradation As a result is the increasing number of prosecutions of companies who have breached regulations for environmental protection and in civil claims relating to harm caused by excessive pollutant releases to the environment Such cases can become extremely protracted as expert witnesses provide their sometimes conflicting interpretations of environmental measurement data and their meaning It is in this context that environmental forensics is developing as a specialism leading to greater formalisation of investigative methods which should lead to more definitive findings and less scope for experts to disagree Now a significant subject in its own right at least one journal devoted to the field and a number of degree courses have sprung up As a result of the topicality and rapid growth of the subject area is the publication of this book the 26th volume in the highly acclaimed Issues in Environmental Science and Technology Series This volume contains authoritative articles by a number of the leading practitioners across the globe in the

environmental forensics field and aims to cover some of the main techniques and areas to which environmental forensics are being applied. The content is comprehensive and describes a number of the key areas within environmental forensics. Topics covered by the authors include Source identification issues, Microbial techniques, Metal contamination and methods of assigning liability, The use of isotopes to determine sources and their applications, Molecular biological methods, Hydrocarbon fingerprinting techniques, Oil chemistry and key compound identification. The emerging role of environmental forensics in groundwater pollution. Additionally, the volume considers specific pollutants and long lived pollutants of groundwater such as halocarbons which have presented particular problems and which are described in some depth as well as the way in which chemical degradation processes can lead to compositional changes which provide valuable information. The book provides a comprehensive overview of many of the key areas of environmental forensics written by some of the leading experts in the field. It will be both of specialist use to those seeking expert insights into the field and its capabilities as well as of more general interest to those involved in both environmental analytical science and environmental law.
