Kane,2014-08-13 These days we take for granted that our computer screens and even our phones will show us images in vibrant full color Digital color is a fundamental part of how we use our devices but we never give a thought to how it is produced or how it came about Chromatic Algorithms reveals the fascinating history behind digital color tracing it from the work of a few brilliant computer scientists and experimentally minded artists in the late 1960s and early 70s through to its appearance in commercial software in the early 1990s Mixing philosophy of technology aesthetics and media analysis Carolyn Kane shows how revolutionary the earliest computer generated colors were built with the massive postwar number crunching machines these first examples of computer art were so fantastic that artists and computer scientists regarded them as psychedelic even revolutionary harbingers of a better future for humans and machines But Kane shows the explosive growth of personal computing and its accompanying need for off the shelf software led to standardization and the gradual closing of the experimental field in which computer artists had thrived Even so the gap between the bright bold presence of color onscreen and the increasing abstraction of its underlying code continues to lure artists and designers from a wide range of fields and Kane draws on their work to pose fascinating questions about the relationships among art code science and media in the twenty first century **Computer Vision Metrics** Scott Krig,2014-06-14 Computer Vision Metrics provides an extensive survey and analysis of over 100 current and historical feature description and machine vision methods with a detailed taxonomy for local regional and global features This book provides necessary background to develop intuition about why interest point detectors and feature descriptors actually work how they are designed with observations about tuning the methods for achieving robustness and invariance targets for specific applications The survey is broader than it is deep with over 540 references provided to dig deeper The taxonomy includes search methods spectra components descriptor representation shape distance functions accuracy efficiency robustness and invariance attributes and more Rather than providing how to source code examples and shortcuts this book provides a counterpoint discussion to the many fine opencv community source code resources available for hands on practitioners **Australian Government Publications** National Library of Australia,1983 Printing Trade News ,1911 Congressional Record United States.
