

The figure below shows the three types of survivorship curves.

Label	Type I, II, or III?	Description of strategy	Example organisms that use this strategy
A	Type I	Organisms have very low offspring and take very good care of them to ensure their survival. High survival at young, because it's really easy to take care of as they age.	Large mammals like humans, elephants, horses, whales, whales.
B	Type II	Organisms equally likely to die at any point throughout their life.	Small animals like Robins, Parrots, birds, lizards.
C	Type III	Organisms have many offspring but do not invest much care in them. They die early on.	Fish, some insects, some plants.

What is meant by **population distribution**?

To summarize, the three main population distribution patterns could be shown in the table below:

Type of distribution	Picture of distribution	Why use this pattern?
Clumped		VERY COMMON Safety in numbers, social interactions, mating and caring for young, resources are clumped.
Dispersed		Scattered resources, variability.
Random		VERY COMMON It's random like seeds blown by wind, and small and germinated in random locations.

imperial conquest rarely represented a sudden bout of ecological devastation it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and environmental issues that we face in the twenty first century world **Global change ecology: threats and solutions** Ming-Chih Chiu, Qinghua Cai, Jhih-Rong Liao, Kozo
