construct an equivalence between the deformation theories of flat connections and Higgs pairs This provides an identification of moduli spaces arising in different contexts The moduli spaces are real Lie groups From each context arises a complex structure and the different complex structures define a hyperkähler structure The twistor space real forms and various group actions are computed explicitly in terms of the Jacobian of  $X$  The authors describe the moduli spaces and their geometry in terms of the Riemann period matrix of  $X$  *The Athenaeum* ,1912 *Subject Guide to Books in Print* ,1997 Research Accomplishments United States.
