- If you exert a force of 500 N to walk 4 m up a flight of stairs in 4 s, how much power do you use? **500 W**
- A machine is a device that can multiply **Force**.
- When a machine does work, it can do all of the following EXCEPT
 - change the direction of a force.
 - increase a force and change the distance a force moves.
 - increase the distance a force moves and change the direction of a force.
 - increase a force and increase the distance a force moves.**
- If you know the input distance and output distance of a machine, which of the following can you calculate? **IMA**
- If you have to apply 30 N of force on a crowbar to lift an rock that weights 330 N, what is the actual mechanical advantage of the crowbar? **11**
- The efficiency of a machine is always less than 100 percent because **of friction**.
- A motor with an efficiency rating of 80 percent must supply 300 J of useful work. What amount of work must be supplied to the motor? **375 J**
- Which of the following is an example of a wheel and axle?

Self-Organizing Systems F.Eugene Yates,2012-12-06

Technological systems become organized by commands from outside as when human intentions lead to the building of structures or machines But many natural systems become structured by their own internal processes these are the self organizing systems and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines Unfortunately complexity is ill defined Global explanatory constructs such as cybernetics or general systems theory which were intended to cope with complexity produced instead a grandiosity that has now mercifully run its course and died Most of us have become wary of proposals for an integrated systems approach to complex matters yet we must come to grips with complexity somehow Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them If they do then a fresh multidisciplinary attack on the difficulties would be a valid scientific task Believing that complexity is a proper scientific issue and that self organizing systems are the foremost example R Tomovic Z Damjanovic and I arranged a conference August 26 September 1 1979 in Dubrovnik Yugoslavia to address self organizing systems We invited 30 participants from seven countries Included

were biologists geologists physicists chemists mathematicians bio physicists and control engineers Participants were asked not to bring manuscripts but rather to present positions on an assigned topic Any writing would be done after the conference when the writers could benefit from their experiences there
