**Investigating Light and Shadow with Young Children (Ages 3-8)** Beth Dykstra Van Meeteren, 2022-06-17 Children are intrigued by switches that power a light source and by items that reflect light and sparkle and they take notice of personal shadows cast on the playground. An understanding of light and shadow is crucial to many STEM fields including astronomy, biology, engineering, architecture, and more. This book shows teachers how to engage children ages 3-8 with light and shadow in a playful way, building an early foundation for the later, more complex study of this phenomena and ultimately for children's interest in professions within the STEM fields. The text offers guidance for arranging the physical environment of classrooms, integrating literacy, learning and investigations, and building partnerships with administrators. Each volume in the STEM for Our Youngest Learners Series includes examples of educators and children engaging in inquiry, learning guidance for selecting materials and arranging the learning environment, modifications and accommodations for diverse learners, support for establishing adult learning communities, and more.
