Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another modern way for to amplify DNA. Select primers, to design your PCR primer, understand how heat is the perfect method to separate the DNA that the template may left behind, at their goal.

Design and

After sampling, you will go to the PCR template. Introducing the sample of DNA you collected. By using a mixture of dNTPs, you can start synthesizing from the primer bases. It is up to you to make the correct sequence accurately, the PCR amplification.

How the structure of DNA results amplification up three

In the simulation, you will see the PCR amplification on the molecular level, illustrating the structure of DNA and the amplification cycle. Including all the correct information, the experimental process, as well as all specifications of the PCR itself.

Identify the molecules

In the PCR simulation, you will collect your samples and other correct samples from the simulation, you will also learn how the primers can change, and you will learn the structure of the molecule.

Learning Objectives

In this part of the simulation, you will see reports:

1. Identify the function of each particular PCR primer amplification and synthesis.
2. Explain to this simulation using the PCR, how to design primer on the template.
