

Student Exploration: Populations and Samples

Background: Frequency distributions describe the entire population, whereas

Key Knowledge: Sampling distributions are formed using the Central Limit Theorem.

As **sample size increases**, individual frequency distributions look more and more like normal distributions. However, sample means and sample standard deviations are decreasing (in a predictable way) as **n** increases. The following graph illustrates the frequency distribution of these variables, without sampling.

1. How would you describe the shape of this distribution?

Normal distribution. The shape of the normal distribution is a bell curve.

2. In the above graph on right, sketch what you think the frequency distribution might look like if the sample size is increased. Explain what might be different about the new one.

3. How would you describe the shape of the distribution of the frequency distributions described above, with each sample mean, without sampling (yet)?

Normal distribution. The shape of the normal distribution is a bell curve.

4. How do the distributions appear when all the data are included? What is the shape of the distribution? What is the mean of each distribution? What is the standard deviation of each distribution?

Normal distribution. The shape of the normal distribution is a bell curve.
