On-Line Trajectory Generation in Robotic Systems Torsten Kröger, 2010-01-10 By the dawn of the new millennium robotics has undergone a major transformation in scope and dimensions This expansion has been brought about by the maturity of the field and the advances in its related technologies From a largely dominant industrial focus robotics has been rapidly expanding into the challenges of the human world The new generation of robots is expected to safely and dependably co-habitat with humans in homes workplaces and communities providing support in services entertainment education health care manufacturing and assistance Beyond its impact on physical

robots the body of knowledge robotics has produced is revealing a much wider range of applications reaching across diverse research areas and scientific disciplines such as biomechanics haptics neurosciences virtual simulation animation surgery and sensor networks among others In return the challenges of the new emerging areas are providing an abundant source of stimulation and insights for the field of robotics It is indeed at the intersection of disciplines that the most striking advances happen The goal of the series of Springer Tracts in Advanced Robotics STAR is to bring in a timely fashion the latest advances and developments in robotics on the basis of their significance and quality It is our hope that the wider dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to further advancement of this rapidly growing field

Robot Calibration Roger Bernard, S. Albright, 1993-10-31 Calibration is playing an increasingly important role in industrial robotics Higher accuracy demands are being placed on flexible assembly and manufacturing systems which in turn require robot manufacturers to produce higher quality precision robots

Robot Control 1991 (SYROCO'91) I. Troch, 2014-05-23 This volume contains 92 papers on the state of the art in robotics research In this volume topics on modelling and identification are treated first as they build the basis for practically all control aspects Then the most basic control tasks are discussed i.e. problems of inverse kinematics Groups of papers follow which deal with various advanced control aspects They range from rather general methods to more specialized topics such as force control and control of hydraulic robots The problem of path planning is addressed and strategies for robots with one arm for mobile robots and for multiple arm robots are presented Also covered are computational improvements and software tools for simulation and control the integration of sensors and sensor signals in robot control

Remote Manipulation Systems L.I. Slutski, 2012-12-06 A famous French writer Anatole France liked to say The future is a convenient place to position our dreams 1927 Indeed this remark gains full meaning when one considers the history of what we call today Robotics For more than 3000 years mankind has dreamt of the possibility of artificial machines that would have all the advantages of human slaves without any of their drawbacks With the developments in technology since the end of World War II mainly with the explosive progress of computers it was thought we might at last succeed in transforming this everlasting dream into reality In the mind of scientists of the 1950s to make such intelligent and autonomous machines before the year 2000 seemed a small challenge it was obvious thanks to computers and Artificial Intelligence But in spite of progress in some directions we

must admit that the dream remains a dream and that the basic problems denying us a successful issue are not solved In fact if we except industrial robots only calling for classical automata theory the main advanced result concerning autonomous and intelligent machines is related to some understanding of reasons why we have failed during the past years Mobile Robotics: Solutions And Challenges - Proceedings Of The Twelfth International Conference On Climbing And Walking Robots And The Support Technologies For Mobile Machines Mohammad Osman Tokhi,O Tosun,Gurvinder S Virk,H L Akin,2009-08-26 This book provides state of the art scientific and engineering research findings and developments in the area of mobile robotics and associated support technologies The book contains peer reviewed articles presented at the CLAWAR 2008 conference Robots are no longer confined to industrial manufacturing environments with a great deal of interest being invested in the use of robots outside the factory environment The CLAWAR conference series established as a high profile international event acts as a platform for the dissemination of research and development findings and supports such a trend to address the current interest in mobile robotics in meeting the needs of mankind in various sectors of the society These include personal care public health and services in the domestic public and industrial environments The editors of the book have extensive research experience and publications in the area of robotics specifically in mobile robotics and their experience is reflected in the careful editing of the contents in the book ECAI 2012 C.
