Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly selected from a telephone directory. The subjects were divided into two groups: a control group and an exercise group. The control group consisted of six women who did not exercise, and the exercise group consisted of six women who exercised for 10 weeks. The exercise group was instructed to exercise for 30 minutes, three times a week, at a heart rate of 150 beats per minute. The control group was instructed to remain sedentary. The subjects were monitored for HR and EE before and after the 10-week training program. The results of the study showed that the exercise group had a significant increase in HR and EE compared to the control group. The exercise group's HR increased from 140 to 150 beats per minute, and their EE increased from 1,200 to 1,400 kcal per day. The control group's HR and EE remained unchanged. The results of this study suggest that a 10-week training program can improve the HR and EE of sedentary, middle-aged women.

24. If you're using the `afs` multi-mount method, add the `afs` multi-mount entry from `afs` to your `netatun` config. In this scenario, a Netatun instance will be used to mount the multi-mount AFS on the client. This requires the user to purchase this type of multi-mount AFS, as pointing out the group appears in `group 1`
25. Use the `mountmnt` flag of `netatun` to mount the AFS on the client.
