Glass and Water Mark Harris, 2015-07-15 Glass and Water is the first book on underwater photography for freedivers. With contributions from expert underwater photographers, this book teaches the skills, knowledge, and equipment necessary to successfully pursue underwater photography without scuba gear. Rather than seeking to replace books on underwater photography, Glass and Water focuses on freediving techniques, equipment, and photo opportunities. By carefully choosing or adapting freediving and photographic equipment, some early hurdles can be avoided. Using appropriate freediving techniques can increase the length of time available for taking photographs underwater. And by being aware of the possibilities, frustrations can be avoided and good subjects sought out. Includes photos and/or contributions from Fred Buyle, Sue Flood, Danny Kessler, Dr. Anne Marie Kitchen, Wheeler Laura Storm, Andrew Sutton, Shane Wasik, and a Foreword by Dan Bolt. Contents include: Foreword by Dan Bolt, Free diving Equipment for Underwater Photography, Photographic Equipment, Underwater Photography Basics, Challenges and Opportunities for Freedivers, Lungcraft, Finning, Descents and Ascents, Neutral Buoyancy, Hydrodynamics, Safety, Creature by Creature, A Virtual Dive Behind the Lens. Plus a Glossary of key terms. Reviews: A very informative book which will help freedivers improve their images. The nicest surprise for me was the Virtual Dive chapter. This chapter alone was worth the price of the book. Glass and Water is obviously aimed at freedivers, but scuba divers would also benefit from the content of this book. UWP magazine. It's most unlikely that you'll come away without learning something brand new and innovative. I'm very impressed indeed. Martin Edge. Read Martin's full review of Glass and Water here. Glass and Water should be as essential as a pair of fins and a camera for underwater photographers. Mark shares his tremendous expertise; the methodical and well-illustrated techniques will benefit anyone wishing to produce great images in the sea. Brian Skerry.

Readercentric Writing for Digital Media David Hailey, 2016-12-05 This book presents an altogether new approach to writing and evaluating writing in digital media It suggests that usability theory provides few tools for evaluating content because usability theory assumes only one kind of writing on the Internet The author suggests three models user centric usability model persuasion centric encouraging the reader to linger and be persuaded Canon camera ads and quality centric encouraging the reader to linger and learn or be entertained because of the quality of the writing NASA gov and YouTube Designed for professional writers and writing students this text provides a rubric for writing in digital media but more importantly it provides a rubric and vocabulary for identifying and explaining problems in copy that already exists The Internet has become a pastiche of cut and paste content often placed by non writers to fill space for no particular reason or by computers with no oversight from humans e g Amazon com Because these snippets are typically on topic but often for the wrong purpose or audience professional writers have difficulty identifying the problems and an even harder time explaining them Finding an effective tool for identifying and explaining problems in digital content becomes a particularly important problem as writers increasingly struggle with growing complications in complex information systems systems that create and manage their own content with little human intervention Being able to look at a body of copy and immediately see that it is problematic is an important skill that is lacking in a surprising number of professional writers Vegetable Crops Pritam Kalia, 2025-04-24 The volume on Vegetable Crops as a part of series entitled Handbooks of Crop Diversity Conservation and Use of Genetic Resources will be a unique resource first of its kind which will elaborate on origin evolution taxonomy identification chemical characterization and genetic improvement of Vegetable Crop Plants Vegetable crops are an important group of crops comprising solanaceous vegetables Cole crops Cucurbitaceous crops Bulb crops Root crops Tuber crops legume vegetables leafy salad vegetables Okra etc There is tremendous diversity within each group of vegetable crops This genetic diversity is from the point of view of landraces and varieties of vegetable crops species used for food processing

nutraceuticals pharmaceuticals etc Vegetables being an integral part of human diet being rich source of diverse nutrients such as vitamins minerals and antioxidants they play an important role in balancing the diet and tackling malnutrition Besides due to their intensive cultivation they also play an important role in enhancing per unit area production and productivity cropping intensity enhancing thereby the farmers income especially that of small and marginal farmers and providing job opportunities The genetic improvement of vegetable crops facilitate continued breeding of varieties with greater resilience to stresses and productivity is mainly dependent on overall genetic variation found in individuals belonging to the cultivated species and or ancestral species related to cultivated species of vegetable crops Since genes of interest can be tapped from plant sources for their introduction through controlled breeding processes for genetic improvement and incorporating of desirable external and internal quality traits therefore accessibility to the information about these plant genetic resources is key to the success of the breeding efforts Since there is a need of comprehensive information about the genetic resources therefore it is important to facilitate their conservation and long term sustainable use in research and improvement The comprehensive information on the availability of genetic diversity in each vegetable crop species in this volume would facilitate priority conservation in gene banks research and use in vegetable crop improvement Realizing the importance of genetic variability in the improvement of vegetable crops from the point of view of biotic and abiotic stress resistance enhanced micronutrient climate change enhanced shelf life nutraceuticals bioactive compounds especially national and international efforts further need to be stepped up for collection characterization evaluation and conservation of vegetable crops genetic resources to facilitate search for new genes research and their use in vegetable crops improvement During 21st century genomics and marker assisted tools have gained importance for hastening the crop improvement programmes by enhancing breeding efficiency Realizing that population in South Asia and Southeast Asia is facing acute problem of under and malnutrition the emphasis on dietary diversification with vegetables is therefore being stressed Besides to enhance farmers income much emphasis is being laid on development of varieties having diverse maturity growth habit resistance to diseases and insect pest to reduce the use pesticides enhanced nutrients and shelf life For these traits we have to look into landraces and wild relatives for the traits of interest Therefore it has been felt to bring out a vegetable volume with additional accessory and supplemental information analyses and specifically filtered information which can go a long way in promoting research search for new genes alleles revealing the opportunities available for exploitation of PGR in generation of cultivars to meet upcoming challenges of vegetable crop improvement and diversification and requirement of cultivars for processing nutraceutical and pharmaceutical industry which will promote contract farming This will also help identification of geographical and genetic diversity gaps for future search of new genes collections Plant Genetic Resources PGR serve as treasures of genes of interest for developing improved future vegetable varieties hybrids besides being key to scientific efforts of developing gene pyramided varieties they are important for mitigating various challenges posed by

increasing population climate change and health conscious society looking for nutraceuticals The proposed vegetable volume on agro biodiversity conservation and use of plant genetic resources with information on available genetic diversity among various groups of vegetable crops and component cultivated species with in a group of food and agriculture in all possible perspectives would be able to reflect the opportunity available for genetic engineering of vegetable crop species It will also go a long way in facilitating more predictive and productive genetic engineering programme to breed futuristic vegetable crops varieties hybrids
