**Applications** Mehmet R. Yuce, 2013-10-16 This book investigates the design of devices systems and circuits for medical applications using the two recently established frequency bands ultra wideband 3.1-10.6 GHz and 60 GHz ISM band. These two bands provide the largest bandwidths available for communication technologies and present many attractive opportunities for medical applications. The applications of these bands in healthcare are wireless body area network (WBAN), medical imaging, biomedical sensing, wearable and implantable devices, fast medical device connectivity, video data transmission, and vital signs monitoring. The recent technological advances and developments proposed or used in medicine based on these two bands are covered. The book introduces possible solutions and design techniques to efficiently implement these systems in medical environment. All individual chapters are written by leading experts in their fields. Contributions by authors are on various applications of ultra wideband and the 60 GHz ISM band including circuit implementation, UWB and 60 GHz signal transmission, antenna design, solution hardware implementation of body sensors, UWB transceiver design, 60 GHz transceiver design, UWB radar for contactless respiratory monitoring, and ultra wideband based medical imaging. The book will be a key resource for medical professionals, biomedical engineers, and graduate and senior undergraduate students in computer electrical electronic and biomedical engineering disciplines.

**Microwaves, Millimeter Wave and Terahertz Liquid Crystals** Anyong Qing, Yizhe Zhao, Zhiyong Zhang, 2024-03-05 This book is the first ever monograph on nematic liquid crystals for microwaves, millimeter waves, and terahertz waves. It presents the first-hand independent studies on nematic liquid crystals for microwaves, millimeter waves, and terahertz waves. This book opens with an introduction to generic liquid crystals and a retrospective review about nematic liquid crystals in microwaves, millimeter waves, and terahertz waves. Attention is then focused on the latest in-house progress on microwave, millimeter wave, and terahertz nematic liquid crystals. Synthesis and characterization of novel nematic liquid crystals are first presented, followed by indigenous technologies to manufacture functional nematic liquid crystal devices for microwaves, millimeter waves, and terahertz waves. A few self-developed representative advanced functional devices are shown to demonstrate the promising perspective of liquid crystals for not only microwaves, millimeter waves, and terahertz waves but also many other non-display applications. The presented studies will attract scientists, engineers, and students from various disciplines such as materials, chemical, electrical, biological, and biomedical engineering. The book is intended for undergraduates, graduates, researchers, professionals, and industrial practitioners who are interested in developing novel liquid crystals and further extending liquid crystals beyond display.
