## **Ontologies for Agents: Theory and Experiences**

Valentina Tamma,Stephen Cranefield,Timothy W. Finin,Steven Willmott,2006-03-30 There is a growing interest in the use of ontologies for multi agent system applications On the one hand the agent paradigm is successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable knowledge sharing and a growing number of applications have benefited from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven that has failed to happen What makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on understanding the goals preferences and constraints posed by the user Autonomy is the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to communicate depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms used to describe a domain and the semantics associated with them In addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based

**Inclusive Urban Design: Public Toilets** Clara Greed,2007-06-01 This is a unique text providing both design guidance and policy direction for the provision and design of public toilets covering city wide district level and site specific principles It highlights the role of urban design in reversing the trend of inadequate toilet provision and sets out guidelines for design which meets both user need and provider requirements Greed presents the fundamental principle that toilets should not be dealt with in isolation from mainstream urban policy but that they should be seen as a serious core component in both strategic urban policy and local area design She argues toilets are valuable townscape features in their own right as manifestation civic pride and good urban design essential architectural components which add to the quality and viability of an area Although a range of design guidance on

toilets exists there is still considerable dissatisfaction with the end product in terms of building design levels of provision location safety layout DDA requirements and accessibility By outlining user demands and provider constraints Greed shows that it is essential for architects to have an informed understanding and practical knowledge of toilet issues when working with public and private sector providers Examples of toilet architecture from other countries and policies from different cultural settings are included for comparative purposes to invigorate UK perspectives *Moody's Municipal & Government Manual* ,1963 *Toledo City Journal* ,1929 *Mergent International Manual* ,2009 Host Bibliographic Record for Boundwith Item Barcode 30112044669122 and Others ,2013 *Moody's Industrial Manual* ,1997 Covering New York American regional stock exchanges international companies *Mergent Industrial Manual* ,2001 **Moody's Manual of Investments: American and Foreign** ,1952 **Official Gazette of the United States Patent Office** United States.
