## REACTION RATES AND EQUILIBRIUM

## SECTION 18.1 RATES OF REACTION (pages 541–543)

This section explains what is meant by the rate of a chemical reaction. It also uses collision theory to derive from the rate of a chemical reaction an equation for the reaction conditions.

## ► Collision Theory (pages 541–543)

1. How can rates of chemical change expressed?

Rates of chemical change are usually expressed in dimensions of moles/liters/second per unit time.

2. Look at Figure 18.1 on page 541. In a typical reaction, as time passes, the amount of reactants decreases and the amount of products increases.

3. What does collision theory say about the reaction of atoms, ions, or molecules resulting in ionic products when they collide?

Collision theory states that the molecules must have enough kinetic energy when they collide to form products.

4. Look at the Space below. One shows a collision that results in the formation of product. Label it effective collision. Label the other collision's distribution collision.

5. In the following sentence true or false? Particles lacking the necessary kinetic energy to react become apart unchanged when they collide. TRUE

6. Look at Figure 18.3 on page 543. Which arrangement of atoms models the least amount of energy?

- a. reactants  
b. activated complex  
c. products

**Basic Concepts of Chemistry** Leo J. Malone, Theodore Dolter, 2008-12-03 Engineers who need to have a better understanding of chemistry will benefit from this accessible book It places a stronger emphasis on outcomes assessment which is the driving force for many of the new features Each section focuses on the development and assessment of one or two specific objectives Within each section a specific objective is included an anticipatory set to orient the reader content discussion from established authors and guided practice problems for relevant objectives These features are followed by a set of independent practice problems The expanded Making it Real feature showcases topics of current interest relating to the subject at hand such as chemical forensics and more medical related topics Numerous worked examples in the text now include Analysis and Synthesis sections which allow engineers to explore concepts in greater depth and discuss outside relevance

**A Solution to the Reaction Rate Equations in the Atmosphere Below 150 Kilometers** Thomas J.

Keneshea, 1963 One way to acquire a better understanding of the formation and destruction of ionization in the atmosphere is through the solution of the system of time dependent reaction rate equations These ordinary differential equations form a simultaneous set each equation of which describes the time rate of change of a particular atmospheric constituent In the general problem all the molecules and atoms whether neutral charged or excited as well as the free electrons would be included A computer program is presented for developing the numerical solution to this problem The method of solution of the set of equations uses a fourth order Runge Kutta integration with a variable mesh When a species enters its quasi equilibrium state its differential equation is removed from the set and its equilibrium equation is inserted into the simultaneous algebraic set The algebraic set is solved by the method of successive substitutions The over all solution is obtained by iteration between the differential and the algebraic sets The ability of the computer program to develop extensive solutions is demonstrated by several examples taken under different conditions
