

23.2 The Terrestrial Planets

Reading Focus

Key Concepts

- What are the distinguishing characteristics of each terrestrial planet?

Reading Strategy

Using Prior Knowledge Copy the web diagram below. Before you read, add properties that you already know about Mars. Then add details about each property as you read. Make a similar web diagram for the other terrestrial planets.

In January 2004, the space rover, *Spirit*, bounced onto the rocky surface of Mars, known as the Red Planet. Shown in Figure 5, *Spirit* and its companion rover, *Opportunity*, were on the Red Planet to study minerals and geological processes, both past and present. They also searched for signs of the liquid water—such as eroded rocks or dry stream channels on Mars's surface. For the next few months, the rovers sent back to Earth numerous images and chemical analysis of Mars's surface. Much of what we learn about the planets has been gathered by rovers, such as *Spirit*, or space probes that travel to the far reaches of the solar system, such as *Voyager*. In this section, we'll explore three terrestrial planets—Mercury, Venus, and Mars—and see how they compare with Earth.

Mercury: The Innermost Planet

Mercury, the innermost and smallest planet, is hardly larger than Earth's moon and is smaller than three other moons in the solar system. Like our own moon, it absorbs most of the sunlight that strikes it and reflects only 6 percent of sunlight back into space. This low percentage of reflection is characteristic of terrestrial bodies that have no atmosphere. Earth, on the other hand, reflects about 30 percent of the light that strikes it. Most of this reflection is from clouds.

Figure 5 *Spirit* roved the surface of Mars and gathered data about the Red Planet's geologic past and present.

FOCUS

Section Objective

- 23.1** Describe the distinguishing characteristics of each terrestrial planet.

Reading Focus

Build Vocabulary

Vocabulary List Encourage students to keep a list of new terms they encounter as they read this chapter. Have them use the context of each term to predict its definition. Go over the terms with the class. Some terms they may select are *rover*, *nonexistent*, *penetrate*, *valley*, *summit*, *bank*, and *prominent*.

Reading Strategy

- Sample answers:
a. explored by rovers
b. numerous large volcanoes

Address Misconceptions

Some students may think that scientific knowledge is only acquired from controlled experiments. However, a great deal of scientific knowledge is a result of fieldwork and careful observations. In fact, a great deal of what we know about the universe and our solar system, we learned strictly from observation. To help students realize this, ask these questions as you teach this section. Ask: What did we learn about Venus from the Magellan spacecraft? (Venus has varied topography like Earth.) What did we learn about Mars from the orbiting spacecraft Mariner 9? (Mars has volcanoes and canyons.) What did we learn about Mars from the rovers *Spirit* and *Opportunity*? (Mars has evaporite minerals and evidence of geological processes caused by liquid water; Mars has sand dunes and impact craters.) What did we learn from Mars Global Surveyor? (Underground springs may have existed on Mars.) Could we have learned these things simply from controlled experiments on Earth? (no.) Verbal
