 American Chemical Society, 2011-06-17 Touted as the most successful NSF funded project published Chemistry in the
 Community ChemCom by the American Chemical Society ACS offers a meaningful and memorable chemistry program for all
 levels of high school students ChemCom covers traditional chemistry topics within the context of societal issues and real
 world scenarios Centered on decision making activities where students are responsible for generating data in an
 investigating analyzing that data and then applying their chemistry knowledge to solve the presented problem The text is
 intensively laboratory based with all 39 of the investigations integrated within the text not separate from the reading With
 the ChemCom program students learn more organic and biochemistry more environmental and industrial chemistry and
 more on the particulate nature of matter than other textbooks all within the relevance of solving problems that arise in
 everyday life Meticulously updated to meet the needs of today's teachers and students the new sixth edition of ChemCom
 adheres to the new science framework as well as the forthcoming next generation of science standards Incorporating
 advances in learning and cognitive sciences ChemCom's wide ranging coverage builds upon the concepts and principles
 found in the National Science Education Standards Correlations are available showing how closely aligned ChemCom is to

 Solving Approach to Aquatic Chemistry Enables civil and environmental engineers to understand the theory and application
 of aquatic equilibrium chemistry The second edition of A Problem Solving Approach to Aquatic Chemistry provides a detailed
 introduction to aquatic equilibrium chemistry calculation methods for systems at equilibrium applications of aquatic
 chemistry and chemical kinetics The text directly addresses two required ABET program outcomes in environmental
 engineering chemistry including stoichiometry equilibrium and kinetics and material and energy balances fate and transport
 of substances in and between air water and soil phases The book is very student centered with each chapter beginning with
 an introduction and ending with a summary that reviews the chapter's main points To aid in reader comprehension important
 terms are defined in context and key ideas are summarized Many thought provoking discussion questions worked examples

and end of chapter problems are also included Each part of the text begins with a case study a portion of which is addressed in each subsequent chapter illustrating the principles of that chapter In addition each chapter has an Historical Note exploring connections with the people and cultures connected to topics in the text A Problem Solving Approach to Aquatic Chemistry includes Fundamental concepts such as concentration units thermodynamic basis of equilibrium and manipulating equilibria Solutions of chemical equilibrium problems including setting up the problems and algebraic graphical and computer solution techniques Acid base equilibria including the concepts of acids and bases titrations and alkalinity and acidity Complexation including metals ligands equilibrium calculations with complexes and applications of complexation chemistry Oxidation reduction equilibria including equilibrium calculations graphical approaches and applications Gas liquid and solid liquid equilibrium with expanded coverage of the effects of global climate change Other topics including chemical kinetics of aquatic systems surface chemistry and integrative case studies For advanced senior undergraduates and first year graduate students in environmental engineering courses A Problem Solving Approach to Aquatic Chemistry serves as an invaluable learning resource on the topic with a variety of helpful learning elements included throughout to ensure information retention and the ability to apply covered concepts in practical settings
