Environmental Issues in Prefabrication fib Fédération internationale du béton, 2003-03-01 Abstract With the world s population growing at an exponential rate extreme attention has to be paid on how environment and resources are treated For the building industry the result will be New laws having direct consequences for the choice of materials and building techniques Sets of standards dealing with environmental matters Customers will prefer products that can document sound environmental behaviour Based on this background it was in fib Commission 3 Environmental Aspects of Design and Construction that a task group was created in order to draft a state of the art report that would make a sort of inventory of all environmental issues in prefabrication identify areas for improvement and collecting available documentation expected to be required for the activities in the future The work aimed at documenting existing environmental properties of precast structures identifying future possibilities and to collecting data required for life cycle assessment of precast structures In the pursuit of this aim the following issues have been investigated Demountable structures re use of components systems for utilizing the thermal mass of concrete production recirculation in the production process transport erection supplementary materials and the environment in the plants During the process of preparing the document it became evident that the

environmental issue does not have the worldwide attention that was expected Although a lot is written about environmental matters all over the world much of it is philosophical considerations with very little facts Many countries in Europe as well as Japan have done a lot of excellent scientific work but it seems that the implementation on the practical level varies considerably Thus it became difficult to collect data from all over the world and as a result the examples presented are dominated by results from the Nordic countries which together with the Netherlands seem to be most advanced on the practical level It also became evident that there are large differences in the systems used for data collection Tables etc containing facts are not always comparable the assumptions may be different Wherever possible this has been pointed out in the text List of contents Introduction 1 Scope 2 Production 3 Transport and erection 4 The structure 5 References Annexes dealing with Life cycle analysis Environmental product declarations How to utilize the thermal mass Example of comparison of structural systems
