

Chemical bonding in crystalline solids

ionic bond

An idealized ionic (or electrovalent) bonding of oppositely charged ions.

covalent bond

Covalent bonds involve electron sharing, such as between these carbon atoms when they form a diamond.

metallic bond

metallic structure, showing possible electron (e^-) paths around the nuclei of metal atoms (represented as spheres with a positive charge)

Metallic bonding can be thought of as a cloud of positively charged ions immersed in a cloud of valence electrons.

van der Waals bond

weak dipole attraction of van der Waals bond

Neutral molecules may be held together by a weak electric force known as the van der Waals bond.

Chtchelkanova,Stuart A. Wolf,Yves Idzerda,2013-11-11 Stuart Wolf This book originated as a series of lectures that were given as part of a Summer School on Spintronics in the end of August 1998 at Lake Tahoe Nevada It has taken some time to get these lectures in a form suitable for this book and so the process has been an iterative one to provide current information on the topics that are covered There are some topics that have developed in the intervening years and we have tried to at

least alert the readers to them in the Introduction where a rather complete set of references is provided to the current state of the art The field of magnetism once thought to be dead or dying has seen a remarkable rebirth in the last decade and promises to get even more important as we enter the new millennium This rebirth is due to some very new insight into how the spin degree of freedom of both electrons and nucleons can play a role in a new type of electronics that utilizes the spin in addition to or in place of the charge For this new field to mature and prosper it is important that students and postdoctoral fellows have access to the appropriate literature that can give them a sound basis in the fundamentals of this new field and I hope that this book is a very good start in this direction *Emergency Medicine Secrets E-Book* Vincent J.
