Visual Security Studies Juha Vuori,Rune Saugmann,2018-08-06 The present volume engages visuality in security from a variety of angles and explores what the subfield of Visual Security Studies might be To structure this experimentation and to encourage a more careful and multifaceted approach to visuality and security the main conceptual move in this volume is to envision three

different transversal meeting points between security and visibility visibility as a modality active in representations and signs of security visibility as practice active in enacting security and visibility as a method active in investigating security These three approaches structure the book together with three areas in which we see visibility as especially pertinent in relation to security in security technologies that envision security and are themselves the objects of visions of security in spectacles of security and security spectatorship and in ways of making security visible In this way the volume works to sensitize International Relations research to visual forms of knowledge and practice by examining visual aspects of security At the same time it allows for debate on how this particular modality of the sensible not only affects what is visible and what is not but also how authority and truth claims come about and how they are compared and evaluated Through engagement with security via the language or code of the visual it is possible to interrogate how scholars in the field understand visibility as well as the economy grammar and performativity of visual articulation and the production of knowledge The volume also examines how visibility can be used as a method in doing research and as a way of presenting research results Visual Security Studies is not a new theory of security or its study instead the present volume suggests that visibility should be envisioned as an aspect of security studies that can be incorporated into pre existing approaches The aim is to highlight how much of contemporary practice is visual and to foster an increased attentiveness to visibility in security politics security practice and to the possibilities of employing visual research methods in security scholarship This book will be of much interest to students of critical security media studies surveillance studies visual sociology and IR in general

International Relations' Last Synthesis? J. Samuel Barkin, Laura Sjoberg, 2019-02-12 Many scholars intentionally or unintentionally have entangled constructivisms and critical theories in problematic ways either by assigning a critical theoretical politics to constructivisms or by assuming the appropriateness of constructivist epistemology and methods for critical theorizing IR s Last Synthesis makes the argument that these connections mirror IR s grand theoretical syntheses of the 1980s and 1990s and have similar constraining effects on the possibilities of IR theory They have been made without adequate reflection in contradiction to the base assumptions of each theoretical perspective and to the detriment of both knowledge accumulation about global politics and theoretical rigor in disciplinary IR By rejecting its over simple syntheses this book hews a road toward reviving IR theorizing

Security, the Environment and Emancipation Matt McDonald, 2012-01-30 This book offers an

examination of the role of emancipation in the study and practice of security focusing on the issue of environmental change. The end of the Cold War created a context in which traditional approaches to security could be systematically questioned. This period also saw a concerted attempt in IR to argue that environmental change constituted a threat to security. This book argues that such a notion is problematic as it suggests that a universal definition of security is possible which prevents a recognition of security as a site of contestation in which a range of actors articulate alternative visions of who or what is in need of being secured. If security is understood and approached in traditional terms as the territorial preservation of the nation state from external threat then it is indeed difficult to see how environmental issues would benefit from being placed on states security agenda. If however security is defined in terms of the emancipation of the most vulnerable individuals from contingent structural oppressions then drawing a relationship between environmental change and security may be beneficial for redressing those environmental issues and prioritising the needs of those most at risk from the manifestations of global environmental change. This book takes the limitations of contemporary approaches to the relationship between the environment and security as its starting point and seeks to do two things. First it aims to illustrate the ways in which arguments over approaches to environmental issues can be viewed as contestation over the meaning of security in particular political contexts. Central here is the composition and assumptions of the dominant security discourse to emerge regarding those issues a framework of meaning for the most important forms of action on behalf of a particular group defining the terms for meaningful contestation and negotiation about security itself within that group. As such the book attempts to illustrate the dynamics of competition over the meaning of security with reference to environmental issues particularly focusing on instances of political change in the dominant security discourse through which that issue is approached. In the process the author points to the central role of these dominant security discourses in underpinning the most practically significant actions regarding environmental issues such as deforestation and global climate change. The book employs methodological tools that enable a focus on how particular frameworks of meaning are constituted and become dominant how they provide a lens through which various issues are approached and how discourses most consistent with redressing environmental change and the suffering of the most vulnerable might come to provide the framework through which security is viewed in particular contexts. This book will be of much interest to students of Critical Security Studies geography sociology IR and Political Science in general.

Transformations of Security Studies Gabi Schlag, Julian Junk, Christopher Daase, 2015-10-30. This volume brings together a group of distinguished scholars to engage in a dialogue on key developments in the study of security. The book provides a comprehensive overview of theoretical empirical and methodological developments within security studies whose political and societal importance has grown significantly in recent years. By bringing together scholars who hold differing perspectives on security this volume provides insights into a variety of approaches and their newest developments including mainstream as well as heterodox perspectives on security.

Thus it aims to build bridges of communication between different camps by initiating a dialogue on the identity and diversity of security studies. It does so in three parts. The first part of the book includes paradigmatic approaches to security that are closely connected to major debates in International Relations such as realism, institutionalism, constructivism as well as approaches to the culture, ethics of security and critical security studies. The second part places emphasis on the broadening and deepening of the concept of security in recent decades. It discusses key empirical frontiers including the continued centrality of the state, the link between democracy and security, environmental security as well as financial security. The third part of the book presents various methodological approaches to the question of security and peace. It provides an overview of new approaches such as the visual turn, quantifying security and method combinations. This book will be of much interest to students of critical security studies, international relations and research methods.

Environmental Security in the Anthropocene Judith Nora Hardt, 2017-09-22. This book provides a critical assessment of the theories and practice of environmental security in the context of the Anthropocene. The work analyses the intellectual foundations, the evolution and different interpretations, strengths and potential of the link between environment and security but also its weaknesses, incoherencies and distortions. To do so, it employs a critical environmental security studies analytical framework and uniquely places this analysis within the context of the Anthropocene. Furthermore, the book examines the practice-theory divide and the political implementation of the environmental security concept in response to global environmental change and in relation to different actors. It pays significant attention to the Environment and Security Initiative (ENVSEC) which is led by different programs of the United Nations, the OSCE and until recently by the North Atlantic Treaty Organization (NATO) among others and has largely been overlooked in the academic literature to date. The goal is to study how environmental security practice could inform and shape the environmental security theory and also to explore how conversely new theoretical insights could contribute to the enhancement of environmental security activities. This book will be of great interest to students and academic scholars of Environmental Security, Critical Security Studies, Green Political Theory, Global Governance and International Relations in general.
