Chordate Origins and Evolution Noriyuki Satoh, 2016-07-14 Chordate Origins and Evolution The Molecular Evolutionary Road to Vertebrates focuses on echinoderms starfish sea urchins and others hemichordates acorn worms etc cephalochordates lancelets urochordates or tunicates ascidians larvaceans and others and vertebrates In general evolution of these groups is discussed independently on a larger scale ambulacrarians echi hemi and chordates cephalo uro vert Until now discussion of these topics has been somewhat fragmented and this work provides a unified presentation of the essential information In the more than 150 years since Charles Darwin proposed the concept of the origin of species by means of natural selection which has profoundly affected all fields of biology and medicine the evolution of animals metazoans has been studied discussed and debated extensively Following many decades of classical comparative morphology and embryology the 1980s marked a turning point in studies of animal evolution when molecular biological approaches including molecular phylogeny MP molecular evolutionary developmental biology evo devo and comparative genomics CG began to be employed There are at least five key events in metazoan evolution which include the origins of 1 diploblastic animals such as cnidarians 2 triploblastic animals or bilaterians 3 protostomes and deuterostomes 4 chordates among deuterostomes and 5 vertebrates among chordates The last two have received special attention in relation to evolution of human beings During the past two decades great advances have been made in this field especially in regard to molecular and developmental mechanisms involved in the evolution of chordates For example the interpretation of phylogenetic relationships among deuterostomes has drastically changed In addition we have now obtained a large quantity of MP evo devo and CG information on the origin and evolution of chordates Covers the most significant advances in this field to give readers an understanding of the interesting biological issues involved Provides a unified presentation of essential information regarding each phylum and an integrative understanding of molecular mechanisms involved in the origin and evolution of chordates Discusses the evolutionary scenario of chordates based on two major characteristic features of animals namely modes of feeding energy sources and reproduction as the two main forces driving animal evolution and benefiting dialogue for future studies of animal evolution

A History of Bodies, Brains, and Minds Francisco Aboitiz, 2024-09-17 A panoramic view of the evolution of life on our planet from its origins to humanity's future In *A History of Bodies Brains and Minds* Francisco Aboitiz provides a brief history of life the brain and cognition from the earliest living beings to our own species The author proceeds from the basic premise that since evolution by natural selection is the process underlying the origin of life and its evolution on earth the brain and thus our minds must also be the result of biological evolution The aim of this book is to narrate how animal bodies came to be built with their nervous systems and how our species evolved with culture technology language and consciousness The book is organized in four parts each delving into a different aspect of evolutionary development Definitions lays the groundwork by discussing the principles of biological evolution and explores the definition and

mechanisms of life itself *Beginnings* describes the origins of life starting from the emergence of the first cells to the development of neurons as the building blocks for brain networks *The Rise of Bodies and Brains* examines the evolution of animals with bilateral symmetry the emergence of chordates and vertebrates and the expansion and diversification of the vertebrate brain *A Singular Ape* explores *Homo sapiens* and our species unique traits such as bipedality tool use culture language communication and consciousness Comprehensive and deeply insightful this book helps us understand our place in the natural world and the cosmos as well as what the future might hold for life on earth

The Evo-Devo Origin of the Nose, Anterior Skull Base and Midface Roger Jankowski, 2013-03-19 The phylontogenic theory proposes an original understanding of nose sinus and midface formation and development by looking back in evolution for the first traces of the olfactory organ and then tracing its successive phyletic transformations to become part of the respiratory apparatus and finally the central point of human facial anatomy Von Baer s Darwin s Haeckel s Garstang s Gould s and Buss explorations of parallels between phylogeny and ontogeny help to trace the nose and midface story The paradigm of existing parallels between ontogeny and phylogeny proves useful both in seeking to understand the holoprosencephalic spectrum of facial malformations which represent radically different pathways of facial development after the life s tape has been started to run again and in formulating hypotheses on chordate to vertebrate evolution The phylontogenic theory leads to new medical hypotheses on nose and sinus diseases and opens the field of evolution and development based medicine

Evolving Neural Crest Cells Brian Frank Eames, Daniel Meulemans Medeiros, Igor Adameyko, 2020-07-28 Vertebrates

possess lineage specific characteristics These include paired anterior sense organs and a robust modular head skeleton built of cellular cartilage and bone All of these structures are derived at least partly from an embryonic tissue unique vertebrates the neural crest The evolutionary history of the neural crest and neural crest cells has been difficult to reconstruct This volume will use a comparative approach to survey the development of the neural crest in vertebrates and neural crest like cells across the metazoa This information will be used to reveal neural crest evolution and identify the genomic genetic and gene regulatory changes that drove them Key selling features Summarizes the data regarding neural crest cells and neural crest derivatives Uses a broad based comparative approach Suggests hypothesis that the origin of neural crest cells involved the novel co activation of ancient metazoan gene programs in neural border cells Illustrates how the emergences of neural crest made possible the diversification of vertebrate heads
