

35-2 The Nervous System

Play any team sport—basketball, softball, soccer—and you will discover that communication is one of the keys to success. Coaches call plays, players signal to one another, and the very best teams communicate in a way that enables them to play as a single unit. Communication can make the difference between winning and losing.

The same is true for living organisms. Nearly all multicellular organisms have communication systems. Specialized cells carry messages from one cell to another so that communication among all body parts is smooth and efficient. In humans, these cells include those of the nervous system. **The nervous system controls and coordinates functions throughout the body and responds to internal and external stimuli.**

Neurons

The messages carried by the nervous system are electrical signals called impulses. The cells that transmit these impulses are called **neurons**. Neurons can be classified into three types according to the direction in which an impulse travels. Sensory neurons carry impulses from the sense organs to the spinal cord and brain. Motor neurons carry impulses from the brain and the spinal cord to muscles and glands. Interneurons connect sensory and motor neurons and carry impulses between them. Although neurons come in all shapes and sizes, they have certain features in common. **Figure 35-5** shows a typical neuron. The largest part of a typical neuron is the **cell body**. The cell body contains the nucleus and much of the cytoplasm. Most of the metabolic activity of the cell takes place in the cell body.

Figure 35-5 The nervous system controls and coordinates functions throughout the body. The basic units of the nervous system are neurons.

Guide for Reading

Key Concepts

- What are the functions of the nervous system?
- How is a nerve impulse transmitted?

Vocabulary

neuron
cell body
dendrite
axon
myelin sheath
resting potential
action potential
threshold
synapse
neurotransmitter

Reading Strategy:

Summarizing As you read, find the main ideas for each paragraph. Write down a few key words from each main idea. Then, use the key words in your summary.

Section 35-2

1 FOCUS

Objectives

35.2.1 Identify the functions of the nervous system.

35.2.2 Describe how a nerve impulse is transmitted.

Guide for Reading

Vocabulary Preview

Tell students that the prefix *neuro-* comes from the Greek word for nerve. Ask: **What do you think the Vocabulary terms neuron and neurotransmitter mean?** (A neuron is a nerve cell; a neurotransmitter is a chemical that transmits messages from a neuron to another cell.)

Reading Strategy

As students read, they should look for Vocabulary words and Key Concepts in the captions and the text. Suggest that students include the Vocabulary words and Key Concepts in their summary.

2 INSTRUCT

Demonstration

Help students appreciate how quickly the cells of the nervous system communicate. Have a volunteer repeat a movement, such as nodding the head, at irregular intervals. Have another volunteer respond to the first movement with a different movement, such as raising a finger. Challenge the class to measure the time it takes for the second volunteer's nervous system to sense, interpret, and respond to the movement made by the first volunteer. (Students probably will find that the response time is too short to measure.) **L1 L2**

Neurons

Use Visuals

Figure 35-5 Point out the nucleus in the cell body. Name each of the other parts of the neuron, and have students locate them in the figure. Urge students to refer to the figure as they read about the parts of a neuron and how they are involved in the transmission of nerve impulses. **L1 L2**
