The Entrepreneurial Self Ulrich Bröckling, 2015-11-09 This is a book about who we are today and how we have become who we are It is about the engineers of the modern soul the entrepreneurial self It is essential reading for all those who care about the incessant demands placed on us to become more than we are to become entrepreneurs of our selves to maximise and optimise our capacities in ways that align personal identity and political responsibility Professor Peter Miller London School of Economics Political Science Ulrich Bröckling claims that the imperative to act like an entrepreneur has turned ubiquitous In Western society there is a drive to orient your thinking and behaviour on the objective of market success which dictates the private and professional spheres Life is now ruled by competition for power money fitness and youth The self is driven to constantly improve change and adapt to a society only capable of producing winners and losers

The Entrepreneurial Self explores the series of juxtapositions within the self created by this call for entrepreneurship. Whereas it can expose unknown potential it also leads to over challenging. It may strengthen self confidence but it also exacerbates the feeling of powerlessness. It may set free creativity but it also generates unbounded anger. Competition is driven by the promise that only the capable will reap success but no amount of effort can remove the risk of failure. The individual has no choice but to balance out the contradiction between the hope of rising and the fear of decline.

Ulrich Brckling is Professor of Cultural Sociology at the Albert Ludwigs University Freiburg Germany. Self-Concept, Motivation and Identity Frédéric Guay, Herbert Marsh, Dennis M. McInerney, Rhonda G. Craven, 2015-06-01. The concept of the Self has a long history that dates back from the ancient Greeks such as Aristotle to more contemporary thinkers such as Wundt, James, Mead, Cooley, Freud, Rogers and Erikson. Tesser, Felson, 2000. Research on the Self relates to a range of phenomena including self esteem, self concept, self protection, self verification, self awareness, identity, self efficacy, self determination etc that could be sharply different or very similar. Despite this long tradition of thinkers and the numerous studies conducted on the Self, this concept is still not very well defined. More precisely, it is not a precise object of study but rather a collection of loosely related subtopics. Baumeister, 1998. Also in the philosophical literature, the legitimacy of the concept of self has been brought into question. Some authors have argued that the self is not a psychological entity per se but rather an illusion created by the complex interplay between cognitive and neurological subsystems. Zahavi, 2005. Although no definitive consensus has been reached regarding the Self, we emphasize in this volume that the Self and its related phenomena including self concept, motivation and identity are crucial for understanding consciousness and therefore important to understand human behavior. Self concept, motivation and identity. Underpinning success with research and practice provides thus a unique insight into self concept and its relationship to motivation and identity from varied theoretical and empirical perspectives. This volume is intended to develop both theoretical and methodological ideas and to present empirical evidence demonstrating the importance of theory and research to effective practice.

Stress and Anxiety Petra Buchwald, Tobias Ringeisen, Michael W. Eysenck, 2008. Over the course of a lifetime, people are vulnerable to stress and anxiety in various domains which may lead to impaired well being and deteriorated health. To address both aspects, this book comprises two parts which deal with stress, anxiety and coping: 1. over the life span and 2. in the context of health promotion. Part one is concerned with stressful person environment interactions and the ways stress impact upon individual and group functioning in different life phases. For example, sources of adolescents' stress may include school demands and frustrations due to sexuality while stress among the elderly might be caused by negative thoughts and feelings about physical deterioration and social isolation. Part two is dedicated to recent research on health promotion. Over time, stress and anxiety may lower resistance and make people more vulnerable to illness. From that perspective, antecedents, side effects and consequences of stress that may cause limitations in physical and psychological functioning are investigated, leading to a variety of serious health problems.

The Political Self

Roderick Tweedy, 2018-03-29 This book explores how our social and economic contexts profoundly affect our mental health and wellbeing and how modern neuroscientific and psychodynamic research can both contribute to and enrich our understanding of these wider discussions It therefore looks both inside and outside indeed one of the main themes of *The Political Self* is that the conceptually discrete categories of inner and outer in reality constantly interact shape and inform each other Severing these two worlds it suggests has led both to a devitalised and dissociated form of politics and to a disengaged and disempowering form of therapy and analysis
