Performance Tasks and Rubrics for Early Elementary Mathematics Charlotte Danielson, Pia Hansen, 2016-02-26

Performance tasks are highly effective tools to assist you in implementing rigorous standards. But how do you create, evaluate, and use such tools? In this bestselling book, educational experts Charlotte Danielson and Pia Hansen explain how to construct and apply performance tasks to gauge students' deeper understanding of mathematical concepts at the early elementary level. You'll learn how to evaluate the quality of performance tasks whether you've written them yourself or found them online. Use performance tasks for instructional decision making and to prepare students for summative assessments. Create your own performance tasks or adapt pre-made tasks to best suit students' needs. Design and use scoring rubrics to evaluate complex performance tasks. Use your students' results to communicate more effectively with parents. This must-have second edition is fully aligned to the Common Core State Standards and assessments and includes a variety of new performance tasks and rubrics along with samples of student work. Additionally, downloadable student handout versions of all the performance tasks are available as free eResources from our website www.routledge.com/97811389069891 so you can easily distribute them to your class.

A Local Assessment Toolkit to Promote Deeper Learning Karin Hess, 2018-02-28 For years, educators have turned to the Hess Cognitive Rigor Matrices (CRM) when it comes to assessment. Now, for the first time, the modules are packaged into one resource to help teachers evaluate the quality and premise of their current assessment system.

The Development of Children's Place-value Numeration Concepts in Grades Two Through Five Sharon Hill Ross, 1985

Linguistic Influences on Mathematical Cognition Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years, an abstract amodal semantic magnitude representation, largely independent of verbal linguistic representations, has been viewed as the core numerical or mathematical representation. This assumption has been substantially challenged in recent years. Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation, spatial magnitude representations, calculation, parity representation, place value representation, and even early number acquisition. Thus, we postulate that numerical and arithmetic processing are not fully independent of linguistic processing. This is not to say that in patients, magnitude processing cannot function independently of linguistic processing; we just suppose these functions are connected in the functioning brain. So far, much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates. After an overview, we present new findings on language influences on seven language levels: Conceptual, Conceptual properties of language, Syntactic, The grammatical structure of languages beyond the word level, Influences, Semantic, The semantic meaning or existence of words, Lexical, The lexical composition of words in particular number words, Visuo-spatial, orthographic, Orthographic properties such as the writing/reading direction of a language, Phonological, Phonological/phonetic properties of languages, Other language-related skills, Verbal working memory and other cognitive skills related to language representations. We hope that this book provides a new and structured overview on the exciting

influences of linguistic processing on numerical cognition at almost all levels of language processing **Alternatives in Assessment of Achievements, Learning Processes and Prior Knowledge** Menucha Birenbaum, F. Dochy, 2012-12-06 Achievement assessment has undergone a major shift from what some call a culture of testing to a culture of assessment. Nowadays a strong emphasis is placed on the integration of assessment and instruction on assessing processes rather than just products and on evaluating individual progress relative to each student's starting point. This book addresses assessment issues in light of the present state of affairs. The first part discusses new alternatives in the assessment of achievement in various subject areas focusing on agenda, practice, impact and evaluation of the assessment. The second part deals with issues related to assessment of the learning process specifically questions concerning the assessment of individual differences in prior knowledge, learning skills and strategies.

Resources in Education, 1997 **Forging Connections in Early Mathematics Teaching and Learning** Virginia Kinnear, Mun Yee Lai, Tracey Muir, 2017-12-12 This edited book promotes thinking, dialogue, research and theorisation on multiple ways of making connections in mathematics teaching and learning in early childhood education. The book addresses some key challenges in research, policy and practice in early childhood mathematics education. It examines diverse ways for learning experiences to connect young children to mathematics and the importance of forging connections between mathematics and young children's lives as key elements in their engagement with mathematics. Each chapter provides research or theoretical provocations and pedagogical implications for connecting children's lived experiences and ways of learning in mathematics teaching. The chapters are drawn from a range of international authors who raise important ideas within the overall context of current research and consider the theoretical and practical implications of their research. As such, the book advances current thinking on mathematics teaching and learning for children in the early years from birth to eight years with an emphasis on children aged birth to 5 years. It considers the purpose and value in connecting mathematics teaching and learning to children's lives and provides provocations for both educators and researchers on the many under-researched and under-represented aspects of early years mathematics teaching and learning.

[Young Children Continue to Reinvent Arithmetic--2nd Grade](#) Constance Kamii, Linda Leslie Joseph, 2004 Responding to their recent research on how children learn mathematics, the authors have revised this bestselling textbook to provide practical advice on what works and what should be avoided when teaching second graders. Features important revisions to their groundbreaking program including the harmful effects of teaching carrying and borrowing.

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24

Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
