Biomaterials Joyce Y. Wong,Joseph D. Bronzino,Donald R. Peterson,2012-12-06 Most current applications of biomaterials involve structural functions even in those organs and systems that are not primarily structural in their nature or very simple chemical or electrical functions Complex chemical functions such as those of the liver and complex electrical or electrochemical functions such as those of the brain and sense organs cannot be carried out by biomaterials at this time With these basic concepts in mind Biomaterials Principles and Practices focuses on biomaterials consisting of different materials such as metallic ceramic polymeric and composite It highlights the impact of recent advances in the area of nano and

microtechnology on biomaterial design Discusses the biocompatibility of metallic implants and corrosion in an in vivo environment Provides a general overview of the relatively bioinert bioactive or surface reactive ceramics and biodegradable or resorbable bioceramics Reviews the basic chemical and physical properties of synthetic polymers the sterilization of the polymeric biomaterials the importance of the surface treatment for improving biocompatibility and the application of the chemogradient surface for the study on cell to polymer interactions Covers the fundamentals of composite materials and their applications in biomaterials Highlights commercially significant and successful biomedical biodegradable polymers Examines failure modes of different types of implants based on material location and function in the body The book discusses the role of biomaterials as governed by the interaction between the material and the body specifically the effect of the body environment on the material and the effect of the material on the body Thermoplastics D.P. Bashford,2012-12-06 The overall aim of this book is to aid the process of sourcing and selecting appropriate thermoplastic polymers There are now a wide diversity of thermoplastics offered for commercial uses At one end of the range are the high volume commodity materials for short life consumer applications Whereas at the other end are the high value engineering materials with significant levels of mechanical physical and electrical performance Within this publication the generic groups of thermoplastics can be identified along with their respective attributes and limitations All thermoplastics are available in different grades The constituents selected to form a grade are chosen to modify aspects of material behaviour both during processing and in the final moulded form The directory addresses materials which can be obtained in granular powder or paste form for subsequent processing Information is not provided directly on semi finished product forms such as films fibres sheet or profiles other than when inferred from the processing descriptions of specified grades The directory covers virgin or compounded material It does not specifically address reclaimed or recycled grades Data is provided for the mechanical and physical properties of moulded grades as processed by the route intended by the primary manufacturer M or compounder C Material grades can be obtained from a number of sources either the original polymer manufacturer or a recognised compounder who produces a range of grades Additive Migration from Plastics Into Foods Thomas Roy Crompton,2007 Plastics are now being used on a large scale for the packaging of fatty and aqueous foodstuffs and beverages both alcoholic and non alcoholic Thus it is likely that some transfer of polymer additives will occur adventitious impurities such as monomers oligomers catalyst remnants and residual polymerisation solvents and low molecular weight polymer fractions from the plastic into the packaged material with the consequent risk of a toxic hazard to the consumer This book covers all aspects of the migration of additives into food and gives detailed information on the analytical determination of the additives in various plastics This book will be of interest to those engaged in the implementation of packaging legislation including management analytical chemists and the manufacturers of foods beverages pharmaceuticals and cosmetics and also scientific and toxicologists in the packaging industry
