Informatics* Alexander Artikis,Dimitris Zissis,2021-02-08 In the last 25 years information systems have had a disruptive effect
on society and business Up until recently though the majority of passengers and goods were transported by sea in many ways
similar to the way they were at the turn of the previous century Gradually advanced information technologies are being
introduced in an attempt to make shipping safer greener more efficient and transparent The emerging field of Maritime
Informatics studies the application of information technology and information systems to maritime transportation Maritime
Informatics can be considered as both a field of study and domain of application As an application domain it is the outlet of
innovations originating from data science and artificial intelligence as a field of study it is positioned between computer
science and marine engineering This new field s complexity lies within this duality because it is faced with disciplinary
barriers yet demands a systemic transdisciplinary approach At present there is a growing body of knowledge that remains
undocumented in a single source or textbook designed to assist students and practitioners This highly useful textbook

reference starts by introducing required knowledge algorithmic approaches and technical details before presenting real world applications The aim is to present interested audiences with an overview of the main technological innovations having a disruptive effect on the maritime industry as well as to discuss principal ideas methods of operation and applications and future developments The material in this unique volume provides requisite core knowledge for undergraduate or postgraduate students employing an analytical approach with numerous real world examples and case studies
