sensors have been prevalent in motion sensing applications for decades and the sensing mechanisms leveraged by MEMS have been continuously extended to applications spanning the detection of gases magnetic fields electromagnetic radiation and more In parallel MEMS resonators have become an emerging field of MEMS and affected subfields such as electronic timing and filtering and energy harvesting They have in addition enabled a wide range of resonant sensors For many years now MEMS have been the basis of various industrial successes often building on novel academic research Accordingly this Special Issue explores many research innovations in MEMS sensors and resonators from biomedical applications to energy **Proceedings of the ... Brandom, 2024-07-15 Reasons for Logic Linguistics ,2006 Logic for Reasons presents a philosophical conception of logic logical expressivism according to which the role of logic is to make explicit reason relations which are often neither monotonic nor transitive. This conception of logic reveals new and enlightening perspectives on inferential roles sequent calculi representation truthmakers and many extant logical theories The book shows how we can understand different metavocabularies as making explicit the same reason relations namely normative pragmatic alethic representational logical and implication space metavocabularies This includes a philosophical account of the pragmatic role of reason relations treatments of nonmonotonic and nontransitive consequence relations in sequent calculi a correspondence between these sequent calculi and variants of truthmaker theory and the introduction of a novel kind of formal semantics that interprets sentences by assigning inferential roles to them The book thus offers logical expressivists and semantic inferentialists new ways to understand logic content inferential roles representation and reason relations This book will appeal to researchers and graduate students who are interested in the philosophy of logic in reasons and reasoning in theories of meaning and content or in nonmonotonic and nontransitive logics TRIPS plus 20 Hanns Ullrich, Reto M. Hilty, Matthias Lamping, Josef Drexl, 2016-01-29 This book examines the impact and shortcomings of the TRIPS Agreement which was signed in Marrakesh on 15 April 1994 Over the last 20 years the framework conditions have changed fundamentally New technologies have emerged markets have expanded beyond national borders some developing states have become global players the terms of international competition have changed and the intellectual property system faces increasing friction with public policies The contributions to this book inquire into whether the TRIPS Agreement should still be seen only as part of an international trade regulation or whether it needs to be understood or even reconceptualized as a framework regulation for the international protection of intellectual property. The purpose therefore is not to define the terms of an outright revision of the TRIPS Agreement but rather to discuss the framework conditions for an interpretative evolution that could make the Agreement better suited to the expectations and needs of today s global economy
