

1. Particles

- If we could divide any substance down into smaller and smaller pieces we could see it is made of tiny particles.
- These particles are so small they could not be seen using a microscope.
- We can represent these particles in models using spheres.

4. Changes in states of matter

- A solid melts when it is heated because the particles are **gaining energy**. This energy is used to break the forces of attraction between the molecules. The more energy a particle has the **faster** it can move.

6. Elements and mixtures

- This diagram shows a mixture of elements.
- Mixtures can be easily separated using techniques such as:
 - Filtration
 - Distillation
 - Chromatography

2. States of matter

- Three states of matter are solid, liquid and gas.

Solid	Liquid	Gas

KS3 Spine

All matter in the universe
is made of small particles

7. Compounds

- **Atoms** of different **elements** can combine together to form a very large number of **compounds**.

3. Differences in states of matter

- In solids the particles are **closely spaced and vibrating**. In liquids there is **random motion** but the particles are in **contact**.
- In a gas there is **random motion** and the particles are **widely spaced**.
- Liquids and gases **flow** and completely fill their container. Gases can be **compressed**.

5. Atoms and elements

- **Atoms** are the **basic building blocks** of **all** living and non-living things anywhere in the universe.
- There are just over 100 different types of **atoms**.
- Substances made of only **one kind of atom** are called **elements**.
- All the known elements are listed in the **periodic table of elements**.

8. Reactions and properties

- A **chemical reaction** involves the **rearrangement** of **atoms** to form new substances, while the **total number of atoms stays the same** (see image above).
- The **properties** of different materials can be explained in terms of the **behaviour of the atoms and groups of atoms** of which they are made.

Pixl March 2015 Non Claculator:

Raw Deal Steven Hill, 2015-10-20 What's going to happen to my job? That's what an increasing number of anxious Americans are asking themselves. The US workforce, which has been one of the most productive and wealthiest in the world, is undergoing an alarming transformation. Increasing numbers of workers find themselves on shaky ground, turned into freelancers, temps, and contractors. Even many full-time and professional jobs are experiencing this precarious shift. Within a decade, a near majority of the 145 million employed Americans will be impacted. Add to that the steamroller of automation, robots, and artificial intelligence already replacing millions of workers and projected to obsolesce millions more, and the jobs picture starts looking grim. Now a weird yet historic mash-up of Silicon Valley technology and Wall Street greed is thrusting upon us the latest economic fraud: the so-called sharing economy, with companies like Uber, Airbnb, and TaskRabbit allegedly liberating workers to become independent and their own CEOs hiring themselves out for ever smaller jobs and wages while the companies profit. But this share-the-crumbs economy is just the tip of a looming iceberg that the middle class is drifting toward. **Raw Deal: How the Uber Economy and Runaway Capitalism Are Screwing American Workers** by veteran journalist Steven Hill is an exposé that challenges conventional thinking and the hype celebrating this new economy by showing why the vision of the techno-sapient leaders and their Ayn Rand libertarianism is a dead end. In **Raw Deal**, Steven Hill proposes pragmatic policy solutions to transform the US economy and its safety net and social contract, launching a new kind of deal to restore power back into the hands of American workers.

Advances in Civil Engineering and Infrastructural Development Laxmikant Madanmanohar Gupta, Maya Rajnarayan Ray, Pawan Kumar Labhasetwar, 2020-11-13 This book comprises selected proceedings of the International Conference on Recent Advancements in Civil Engineering and Infrastructural Developments (ICRACEID 2019). The contents are broadly divided into five areas: i) smart transportation with urban planning, ii) clean energy and environment, iii) water distribution and waste management, iv) smart materials and structures, and v) disaster management. The book aims to provide solutions to global challenges using innovative and emerging technologies covering various fields of civil engineering. The major topics covered include urban planning, transportation, water distribution, waste management, disaster management, environmental pollution, and control of environmental impact assessment, application of GIS and remote sensing, and structural analysis and design. Given the range of topics discussed, the book will be beneficial for students, researchers, as well as industry professionals.
