deadlines and marginally effective performance fiddling that is commonplace with traditional methods of Oracle performance tuning In this crucial book Cary Millsap former VP of Oracle's System Performance Group clearly and concisely explains how to use Oracle's response time statistics to diagnose and repair performance problems Cary also shows how queueing theory can be applied to response time statistics to predict the impact of upgrades and other system changes Optimizing Oracle Performance eliminates the time consuming trial and error guesswork inherent in most conventional approaches to tuning You can determine exactly where a system's performance problem is and with equal importance where it is not in just a few minutes even if the problem is several years old Optimizing Oracle Performance cuts a path through the complexity of current tuning methods and streamlines an approach that focuses on optimization techniques that any DBA can use quickly and successfully to make noticeable even dramatic improvements For example the one thing database users care most about is response time Naturally DBAs focus much of their time and effort towards improving response time But it is entirely too easy to spend hundreds of hours to improve important system metrics such as hit ratios average latencies and wait times only to find users are unable to perceive the difference And an expensive hardware upgrade may not help either It doesn't have to be that way Technological advances have added impact efficiency measurability predictive capacity reliability speed and practicality to the science of Oracle performance optimization Optimizing Oracle Performance shows you how to slash the frustration and expense associated with unraveling the true root cause of any type of performance problem and reliably predict future performance The price of this essential book will be paid back in hours saved the first time its methods are used
