Joan Holt, 2017-02-15 The global trade of aquatic organisms for home and public aquariums along with associated equipment and accessories has become a multi billion dollar industry Aquaculture of marine ornamental species still in its infancy is recognized as a viable alternative to wild collection as it can supplement or replace the supply of wild caught specimens and potentially help recover natural populations through restocking This book collects into a single work the most up to date information currently available on the aquaculture of marine ornamental species It includes the contributions of more than 50 leading scientists and experts on different topics relevant for the aquaculture of the most emblematic groups of organisms traded for reef aquariums From clownfish to

angelfish tangs and seahorses as well as corals anemones shrimps giant clams and several other reef organisms all issues related with the husbandry breeding and trade are addressed with explanatory schemes and illustrations being used to help in understanding the most complex topics addressed Marine Ornamental Species Aquaculture is a key reference for scientists and academics in research institutes and universities public and private aquaria as well as for hobbyists Entrepreneurs will also find this book an important resource as the culture of marine ornamental species is analyzed from a business oriented perspective highlighting the risks and opportunities of commercial scale aquaculture of marine ornamentals

Essential Zebrafish Methods: Genetics and Genomics H. William Detrich III, Leonard I. Zon, Monte Westerfield, 2009-09-05 Due to its prolific reproduction and the external development of the transparent embryo the zebrafish is the prime model for genetic and developmental studies as well as research in genomics While genetically distant from humans nonetheless the vertebrate zebrafish has comparable organs and tissues that make it the model organism for study of vertebrate development This book one of two new volumes in the Reliable Lab Solutions series dealing with zebrafish brings together a robust and up to date collection of time tested methods presented by the world s leading scientists Culled from previously published chapters in Methods in Cell Biology and updated by the original authors where relevant it provides a comprehensive collection of protocols describing the most widely used techniques relevant to the study of zebrafish genetics and genomics The methods in this volume were hand selected by the editors whose goal was to provide a handy and cost effective collection of fail safe methods tips and tricks of the trade to both experienced researchers and more junior members in the lab Provides busy researchers a quick reference for time tested methods and protocols that really work updated where possible by the original authors Gives pragmatic wisdom to the non specialist from experts in the field with years of experience with trial and error

Marine Plankton Claudia Castellani, Martin Edwards, 2017 A thorough understanding of planktonic organisms is the first step towards a real appreciation of the diversity biology and ecological importance of marine life A

detailed knowledge of their distribution and community composition is particularly important since these organisms are often very delicate and sensitive to change and can be used as early indicators of environmental change Natural and man induced modification of the environment can affect both the distribution and composition of plankton with important ecological and economic impacts Marine Plankton provides a practical guide to plankton biology with a large geographic coverage spanning the North Sea to the north eastern Atlantic coast of the USA and Canada The book is divided into three sections an overview of plankton ecology an assessment of methodology in plankton research covering sampling preservation and counting of samples and a taxonomic guide richly illustrated with detailed line drawings to aid identification This is an essential reference text suitable for senior undergraduate and graduate students taking courses in marine ecology particularly useful for fieldwork as well as for professional marine biologists It will also be of relevance and use to environmental scientists conservation biologists marine resource managers environmental consultants and other specialised practitioners
