Beyond Plate Tectonics James Maxlow,2018 Science is never settled New revolutionary ideas have always overturned the settled sciences of the past In this far reaching book the author looks beyond plate tectonics in order to detail the next earth science revolution Drawing upon his work from four decades as a professional geologist and researcher the author reveals the weaknesses of conventional plate tectonic theory This research utilizes an extensive range of global observational data in order to reverse engineer geology back in time Reverse engineering seafloor and crustal geology enables past plate assemblages and configurations of the ancient continents to be accurately constrained using geology rather than geophysics From this a series of spherical geological models of the Earth are presented showing the precise locations and configurations of the ancient continents ranging back in time to the early Archaean These plate assemblages represent the first time that models of the ancient Earth have been geologically constrained back to the early Archaean An extensive range of additional global observational data are then displayed on the spherical models in order to quantify the location of the ancient poles and equator climate zones biogenic distributions exposed lands and seas as well as global distributions of hydrocarbon and metallic resources The research outcomes presented in this book are applicable to all disciplines of the Earth sciences and will appeal to a broad range of professional expertise in particular those with a grounding in the Earth sciences It is a must read for undergraduates and

State Assessment Systems National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Best Practices for State Assessment Systems: Improving Assessment While Revisiting Standards, 2011-01-02 Educators and policy makers in the United States have relied on tests to measure educational progress for more than 150 years and have used the results for many purposes They have tried minimum competency testing portfolios multiple choice items brief and extended constructed response items and more They have contended with concerns about student privacy test content and equity and they have responded to calls for tests to answer many kinds of questions about public education and literacy international comparisons accountability and even property values State assessment data have been cited as evidence for claims about many achievements of public education and the tests have also been blamed for significant failings States are now considering whether to adopt the

common core academic standards and are also competing for federal dollars from the Department of Education's Race to the Top initiative. Both of these activities are intended to help make educational standards clearer and more concise and to set higher standards for students. As standards come under new scrutiny, so too do the assessments that measure their results. This book summarizes two workshops convened to collect information and perspectives on assessment in order to help state officials and others as they review current assessment practices and consider improvements.

Best Practices for State Assessment Systems, Part I National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Best Practices for State Assessment Systems: Improving Assessment While Revisiting Standards, 2010-07-28

Educators and policy makers in the United States have relied on tests to measure educational progress for more than 150 years. During the twentieth century, technical advances such as machines for automatic scoring and computer-based scoring and reporting have supported states in a growing reliance on standardized tests for statewide accountability. State assessment data have been cited as evidence for claims about many achievements of public education and the tests have also been blamed for significant failings. As standards come under new scrutiny, so too do the assessments that measure their results. The goal for this workshop, the first of two, was to collect information and perspectives on assessment that could be of use to state officials and others as they review current assessment practices and consider improvements.
