Size Solutions Rens van de Schoot, Milica Miočević, 2020-02-13 Researchers often have difficulties collecting enough data to test their hypotheses either because target groups are small or hard to access or because data collection entails prohibitive costs Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research Each chapter illustrates statistical methods that allow researchers to apply the optimal statistical model for their research question when the sample is too small This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations and solutions include both classical and Bayesian methods All proposed solutions are described in steps researchers can implement with their own data and are accompanied with

ECSM2015-Proceedings of the 2nd European Conference on Social Media 2015 Dr Paula Peres, Dr Anabela Mesquita, 2015-07-06 Complete proceedings of the 2nd European Conference on Social Media Porto Portugal. Published by Academic Conferences and Publishing International Limited. The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days, months, years and beyond. This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales. Dealing with conceptual time, mental time travel also called mental simulation, self projection, episodic semantic memory, prospection, foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge. Moreover, contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors. But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time? This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa, no less progress and integrative synthesis within and across scientific domains might be facilitated. Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit. As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time, namely the interplay of anticipatory attention and

working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales Values, Economic Crisis and Democracy Mălina Voicu, Ingvill C. Mochmann, Hermann Dülmer, 2016-01-29 For the past decade European countries have undergone a severe economic crisis with severe consequences both for individuals and for governments Unemployment and rising poverty have compelled individuals to reconsider their own priorities and goals while governments have been forced to rethink social policies on the national level as well as their international economic and political agreements Some countries have been more deeply affected by the crisis than others and the impact of economic shortage on individuals and governments has differed not only because of the different magnitudes of the crisis but also because individuals react differently to the contextual changes This book makes use of cross national survey data to explore the impact of wealth and economic contexts on social values Instead of attempting to explain how aggregate changes occur as previous volumes have done the chapters in this collection focus on micro level effects to interrogate more deeply the interplay between attitudes and values and the way both can change as a result of transformation of economic context This book elaborates on several dimensions of value change the measurement model and the way it changes under the impact of economic shortage the connection between universal value orientations and attitudes towards different objects e g the welfare state immigrants and ethnic groups the effects of economic factors and vulnerability on values and attitudinal orientations how particular political and economic contexts produce changes in political orientations This book focuses on the interrelationship of social values attitudes and economic scarcity in the context of the last economic crisis experienced by many European countries It will appeal to scholars and students of sociology political science and economics **ECGBL 2022 16th European Conference on Game-Based Learning** Conceição Costa, 2022-10-06
