Web Design & Development Nicolae Sfetcu, A guide for developing web sites by means of conceptualization planning modeling and execution of electronic media delivery via Internet. Web development is a broad term for any activities related to developing a web site for the World Wide Web or an intranet. This can include e commerce business development web design web content development client side server side coding and web server configuration. However among web professionals web development usually refers only to the non design aspects of building web sites e.g writing markup and coding. Web development can range from developing the simplest static single page of plain text to the most complex web based internet applications electronic businesses or social network services. Web design is a process of conceptualization planning modeling and execution of electronic media delivery via Internet in the form of Markup language suitable for interpretation by Web browser and display as Graphical user interface GUI.

Object Oriented Modeling And Design With UML Ajit Singh, 2019-05-16 The Unified Modeling Language UML is inherently object oriented modeling language and was designed for use in object oriented software applications. The applications could be based on the object oriented technologies recommended by the Object Management Group (OMG) which owns the UML. The initial versions of UML UML 1.x were based on three leading object oriented methods: Booch, OMT and OOSE to represent the culmination of best practices in practical object oriented modeling. UML 2.x is still object oriented in its core though there were some apparently unsuccessful attempts to extend UML to support other development methods. This book provides practical guidance on the modeling and design of object oriented systems. Its specific goals are the following: To provide a sound understanding of the fundamental concepts and historical evolution of the object model. To facilitate a mastery of the notation and process of object oriented modelling and design. To teach the realistic application of object oriented modelling and design within a variety of problem domains. The concepts presented all stand on a solid theoretical foundation but this is primarily a pragmatic book that addresses the practical needs and concerns of software engineering practitioners from the architect to the software developer.

services to the user's situational needs and interact with other services or resources in their environment on an ad hoc basis. Designing such self-adaptive context-aware knowledge processing systems is in itself a formidable challenge. This book presents core findings from the VENUS project at the Interdisciplinary Research Center for Information System Design ITeG at Kassel University where researchers from different fields such as computer science, information systems, human computer interaction, and law together seek to find general principles and guidelines for the design of socially aware ubiquitous computing systems. To this end, system usability, user trust in the technology, and adherence to privacy laws and regulations were treated as particularly important criteria in the context of socio-technical system design. During the project, a comprehensive blueprint for systematic interdisciplinary software development was developed covering the particular functional and non-functional design aspects of ubiquitous computing at the interface between technology and human beings. The organization of the book reflects the structure of the VENUS work program. After an introductory part I, part II provides the groundwork for VENUS by presenting foundational results from all four disciplines involved. Subsequently, part III focuses on methodological research funneling the development activities into a common framework. Part IV then covers the design of the demonstrators that were built in order to develop and evaluate the VENUS method. Finally, part V is dedicated to the evaluation phase to assess the user acceptance of the new approach and applications. The presented findings are especially important for researchers in computer science, information systems, and human computer interaction but also for everyone working on the acceptance of new technologies in society in general.
