**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary, middle-aged men. The subjects were divided into two groups: a control group and an exercise group. The exercise group performed a 12-week training program consisting of three sessions per week, each lasting 30 minutes. The control group did not exercise. The HR and HRR were measured at rest and during exercise at the beginning and end of the 12-week period. The results showed that the exercise group had a significant decrease in HR and HRR at rest and during exercise compared to the control group. The decrease in HR and HRR was greater in the exercise group than in the control group. The results suggest that a 12-week training program can improve the cardiovascular fitness of sedentary, middle-aged men.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, `mountmnt=/usr/bin/netatun/afs`. Depending on the configuration of the system, this may be sufficient. This may require the `afs` to be installed. This type of multi-mount will be pointing on the `afs` group (see [page 13](#)).
25. Do not include the `afs` of `mountmnt` in `afs` dependencies.
26. When using the `afs` multi-mount method, the `afs` group is not in the `afs` group. Use the `afs` group.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, suppose the price for the output rises. The producer will want to produce more of the output because the marginal revenue from selling the output is now higher. The producer will continue to increase output until the marginal revenue is equal to the marginal cost of producing the output.
