Waves Unit 2, Worksheet 5

1. The illustration below shows a series of transverse waves. Label each part in the space provided.

- Crest
- wavelength
- amplitude
- trough
- amplitude
- wavelength
- line of equilibrium

Fill in the blanks:

- Waves carry energy from one place to another.
- The highest point on a transverse wave is the crest while the lowest part is the trough.
- The amplitude is the height of the wave.
- The distance from one crest to the next is the wavelength.
- Below are a number of series of waves. Underneath each diagram write the numbers of waves in the series.

- Which of the above has the biggest amplitude? Diagram A
- Which of the above has the shortest wavelength? C
- Which of the above has the longest wavelength? D

7. Express in words and mathematically the relationship between

a. period and frequency

$$P = \frac{1}{f}$$

$$T = \frac{1}{f}$$

inversely proportional to frequency

b. wavelength and frequency

$$v = f\lambda$$

wavelength is inversely proportional to frequency

c. wavelength and period

~~$$v = f\lambda$$~~

$$v = \frac{\lambda}{T}$$

directly proportional

8. Consider a wave generator that produces 10 pulses per second. The speed of the waves is 300. cm/s.

a. What is the wavelength of the waves?

$$v = f\lambda \quad \lambda = \frac{v}{f} \rightarrow \frac{300}{10} = 30 \text{ cm}$$

b. What happens to the wavelength if the frequency of pulses is increased?

if $f \uparrow$ then $\lambda \downarrow$

Vibrations and Waves (Part B: Waves) S. Kaliski, 2013-10-22 This book gives a comprehensive overview of wave phenomena in different media with interacting mechanical electromagnetic and other fields Equations describing wave propagation in linear and non linear elastic media are followed by equations of rheological models models with internal rotational degrees of freedom and non local interactions Equations for coupled fields thermal elastic electromagnetic piezoelectric and magneto spin with adequate boundary conditions are also included Together with its companion volume Vibrations and Waves Part A Vibrations this work provides a wealth of information about dynamical phenomena in different media and fields which will be of considerable interest to both scientists and graduate students Introduction to Network Traffic Flow Theory Wen-Long Jin, 2021-04-13 Introduction to Network Traffic Flow Theory Principles Concepts Models and Methods provides a comprehensive introduction to modern theories for modeling mathematical analysis and traffic simulations in road networks The book breaks ground addressing traffic flow theory in a network setting and providing researchers and transportation professionals with a better understanding of how network traffic flows behave how congestion builds and dissipates and how to develop strategies to alleviate network traffic congestion The book also shows how network traffic flow theory is key to understanding traffic estimation control management and planning Users will find this to be a great resource on both theory and applications across a wide swath of subjects including road networks and reduced traffic congestion Covers the most theoretically and practically relevant network traffic flow theories Provides a systematic introduction to traditional and recently developed models including cell transmission link transmission link queue point queue macroscopic and microscopic models junction models and network stationary states Applies modern network traffic flow theory to real world applications in modeling analysis estimation control management and planning Energy Research Abstracts ,1989 *Doppler Radar Meteorological Observations: Doppler radar theory and meteorology* ,1990 *Doppler Radar Meteorological Observations* ,1990 **Applied Mechanics Reviews** ,1972 Aeronautical Engineering Review ,1957 *Urban Redevelopment and Traffic Congestion Management Strategies* Yanli Wang, Bing Wu, Linbo Li, 2022-05-31 This book focuses on the relationship between urban land redevelopment and traffic systems and discusses the related research Consisting of three main parts the first analyzes the interaction between land redevelopment and traffic congestion as well as the mechanisms and causes of traffic congestion The second part presents strategies for the prevention and control of traffic congestion under urban land redevelopment proposing a two stage evaluation system of traffic congestion pre inspection and traffic impact analysis in the planning and implementation stages of land redevelopment Lastly the third section includes an application case analysis of the proposed traffic congestion management strategy The Ancient Origins of Consciousness Todd E. Feinberg, Jon M. Mallatt, 2016-03-25 How consciousness appeared much earlier in evolutionary history than is commonly assumed and why all vertebrates and perhaps even some invertebrates are conscious

How is consciousness created When did it first appear on Earth and how did it evolve What constitutes consciousness and which animals can be said to be sentient In this book Todd Feinberg and Jon Mallatt draw on recent scientific findings to answer these questions and to tackle the most fundamental question about the nature of consciousness how does the material brain create subjective experience After assembling a list of the biological and neurobiological features that seem responsible for consciousness and considering the fossil record of evolution Feinberg and Mallatt argue that consciousness appeared much earlier in evolutionary history than is commonly assumed About 520 to 560 million years ago they explain the great Cambrian explosion of animal diversity produced the first complex brains which were accompanied by the first appearance of consciousness simple reflexive behaviors evolved into a unified inner world of subjective experiences From this they deduce that all vertebrates are and have always been conscious not just humans and other mammals but also every fish reptile amphibian and bird Considering invertebrates they find that arthropods including insects and probably crustaceans and cephalopods including the octopus meet many of the criteria for consciousness The obvious and conventional wisdom shattering implication is that consciousness evolved simultaneously but independently in the first vertebrates and possibly arthropods more than half a billion years ago Combining evolutionary neurobiological and philosophical approaches allows Feinberg and Mallatt to offer an original solution to the hard problem of consciousness

Macroscopic Models for Vehicular Flows and Crowd Dynamics: Theory and Applications Massimiliano Daniele Rosini, 2013-03-15 This monograph presents a systematic treatment of the theory for hyperbolic conservation laws and their applications to vehicular traffics and crowd dynamics In the first part of the book the author presents very basic considerations and gradually introduces the mathematical tools necessary to describe and understand the mathematical models developed in the following parts focusing on vehicular and pedestrian traffic The book is a self contained valuable resource for advanced courses in mathematical modeling physics and civil engineering A number of examples and figures facilitate a better understanding of the underlying concepts and motivations for the students Important new techniques are presented in particular the wave front tracking algorithm the operator splitting approach the non classical theory of conservation laws and the constrained problems This book is the first to present a comprehensive account of these fundamental new mathematical advances *Prentice Hall Physical Science Concepts in Action Program Planner National Chemistry Physics Earth Science*, 2003-11 Prentice Hall Physical Science Concepts in Action helps students make the important connection between the science they read and what they experience every day Relevant content lively explorations and a wealth of hands on activities take students understanding of science beyond the page and into the world around them Now includes even more technology tools and activities to support differentiated instruction **Technical Abstract Bulletin**, [A Bridge between Conceptual Frameworks](#) Raffaele Pisano, 2015-06-30 This book analyzes scientific problems within the history of physics engineering chemistry astronomy and medicine correlated with technological applications in the

social context When and how is tension between disciplines explicitly practised What is the conceptual bridge between science researches and the organization of technological researches in the development of industrial applications The authors explain various ways in which the sciences allowed advanced modelling on the one hand and the development of new technological ideas on the other hand An emphasis on the role played by mechanisms production methods and instruments bestows a benefit on historical and scientific discourse theories institutions universities schools for engineers social implications as well Scholars from different traditions discuss the emergency style of thinking in methodology and in theoretical perspective aim to gather and re evaluate the current thinking on this subject It brings together contributions from leading experts in the field and gives much needed insight into the subject from a historical point of view The volume composition makes for absorbing reading for historians philosophers and scientists Nuclear Science Abstracts ,1976
