

[illegible]

These findings are consistent with the idea that the observed effects are not simply a function of the number of items in the list, but rather reflect a more complex interaction between the number of items and the number of items that are recalled. The results suggest that the number of items that are recalled is a function of the number of items in the list, and that the number of items that are recalled is a function of the number of items that are recalled.

- **Stress** is a response to a stimulus that is perceived as a threat or challenge to the individual's well-being.
- **Stressors** are the external factors that trigger the stress response, such as work pressure, financial problems, or family conflicts.
- **Stressors** can be categorized into acute stressors (short-term) and chronic stressors (long-term).
- **Stress** can have both physical and psychological effects on the individual.
