

and 1086 with internal steering cylinder use American Coleman units. All models equipped with external steering cylinder use Elwood 4-wheel drive units.

American Coleman front axle assembly consists of a one-piece center housing having flanged ends to which stub axle ends are bolted. Wheel spindles and wheel hubs are carried on tapered roller bearings. The axle center housing incorporates a straddle mounted pinion and a four pinion differential gear unit. Full floating axles extend outward from the differential and attach the Cardan type universal joints located inside wheel hubs.

Elwood front axle assembly consists of a one-piece center housing having ball type pivot ends to which steering knuckles are attached. The steering knuckles and end housings are carried on tapered roller bearings. The axle center housing incorporates a straddle mounted pinion and a four pinion differential gear unit. Drive shafts extend outward from the differential and attach to planetary type end housings. The shafts pivot on universal joints located inside the steering knuckles. The planetary gears are carried on needle bearings.

Power for the front axle assembly is taken from a gear reduction unit (transfer

case) which is bolted to left side of tractor rear frame and driven by an idler gear on reverse idler shaft of the range transmission. The reduction unit and front axle are connected by a drive shaft fitted with two conventional universal joints of which the rear has a slip joint that compensates for oscillation of front axle.

The gear reduction unit (transfer case) has a shifting mechanism which permits shifting to neutral, thus disconnecting power to the front axle. Gear sets with various ratios are available for the reduction unit to match front and rear tire size combinations. Therefore, it is essential that correct front and rear tire sizes be used with the correct gear set. If a change in tire sizes or gear sets is contemplated, contact International Harvester Company for information concerning proper combinations.
