Monthly Catalog of United States Government Publications, International Airline Alliances : EC Competition Law/US Antitrust Law and International Air Transport Angela Cheng-Jui Lu, 2003-01-01

This new study takes a keen look at the problems facing the international community due to conflicts arising from applications of varying competition laws by different competition authorities to international airline alliances As a result of privatisation deregulation liberalisation and globalisation international air carriers form alliances with one another in order to cope with growing competition in the international air transport market This book clearly provides an introduction to the background to and origin of airline alliances different models of alliances and the related anti competitive practices resulting from existing international airline alliances The potential anti competitive practices resulting from these cross border alliances trigger a great deal of concern from various competition authorities Thus this study goes on to provide a detailed analysis regarding the relevant EC competition law and US antitrust law and their applications to alliance activities The comparison of different applications of

EC competition law and US antitrust law to international airline alliances provides leading research results first hand In the conclusion the essential elements regarding establishing a level playing field in the international air transport market are identified and the author provides possible solutions for the harmonisation of different applications of competition law to international airline alliances **Journal of the Senate of the United States of America** United States. This thesis shows the development of a conceptual future radar system for automotive applications. The focus is on providing a large antenna aperture to achieve the required high angular resolution. Two genetic algorithms are developed to optimize the antenna array for a good side lobe level while providing high angular resolution. Two demonstrators are built to implement certain aspects of the proposed radar system and prove the general concept viable. The first demonstrator features a large aperture with a limited side lobe level and is using a modular approach. The modules are synchronized with a radio over fiber system. The second demonstrator uses the previously proposed antenna array which is implemented with a synthetic aperture radar approach. The system's capabilities in a real scenario are demonstrated and the reconstruction of a high resolution three dimensional image from the captured data is shown. Das Radar stellt neben Kamera und Lidar Systemen einen zentralen Sensor für das autonome Fahren dar. Dabei ist die relativ geringe Winkelauflösung der primäre Nachteil des Radars. Diese Arbeit zeigt die Entwicklung eines konzeptionellen zukünftigen Radarsystems für automobile Anwendungen. Der Schwerpunkt liegt auf der Umsetzung einer großen Antennenapertur um die erforderliche hohe Winkelauflösung zu erreichen. Zwei evolutionäre Algorithmen werden vorgestellt um das Antennen Array auf einen guten Nebenkeulen Pegel zu optimieren und gleichzeitig eine hohe Winkelauflösung zu erreichen. Zwei Demonstratoren werden gebaut um bestimmte Aspekte des vorgeschlagenen Radarsystems zu implementieren und die Durchführbarkeit des allgemeinen Konzepts zu zeigen. Der erste Demonstrator weist eine große Apertur mit einem begrenzten Nebenkeulen Niveau auf und verwendet einen modularen Ansatz. Die Module sind mit einem Radio over Fiber System synchronisiert. Der zweite Demonstrator verwendet die zuvor entworfene Antennenanordnung die mit einem Radar mit synthetischer Apertur realisiert wird. Die Fähigkeiten des Systems werden in einem realen Szenario demonstriert und die Rekonstruktion eines hochauflösenden dreidimensionalen Bildes aus den erfassten Daten gezeigt.
