NASA Technical Memorandum, 1976 **The BRICS Studies** Xu Xiujun, 2020-05-14. Given their immense potential for development and representation of a new international political and economic order, the BRICS countries have become a strong nascent force on the global stage. However, as overall economic growth continues to slow down and the geopolitical situation becomes more complex, the BRICS countries are facing a series of new challenges that require further development in the way they cooperate with one another. This volume offers a panoramic view of cooperation between the BRICS countries in the light of these new challenges. The editors reveal that policy coordination has been strengthened, bringing into play complementary advantages as viable ways for promoting robust, sustainable and balanced growth in the world economy. They argue that the experience gained and lessons learned in the development of and cooperation between the BRICS countries has offered a positive role model for cooperation between other countries as well as providing valuable lessons for research in international politics. Students and scholars in international relations and politics will benefit from this volume.

The Rocket Lab Michael G. Smith, 2023-05-15. The Rocket Lab. Maurice Zucrow, Purdue University and America's Race to Space focuses on the golden era of space exploration between 1946 and 1966, specifically the life and times of Purdue University's Dr. Maurice J. Zucrow, a pioneering teacher and researcher in aerospace engineering. Zucrow taught America's first university course in jet and rocket propulsion, wrote the field's first textbook and established the country's first educational Rocket Lab. He was part of a small circle of innovators who transformed Purdue into the country's largest engineering university, which became a cradle of astronauts. Taking a chronological and thematic approach, The Rocket Lab weaves between the local and national drawing in rival universities, especially Harvard, MIT, Princeton and Caltech. Also covered is Zucrow's role in the national project system of research and development through World War II and the Cold War. At Aerojet, he was one of the country's original project engineers, dedicated to scientific technical expertise and the stepwise approach. He made vanguard power plant contributions to the Northrop Flying Wing as well as the Corporal, Nike and Atlas missiles, among others. Zucrow's work in propulsion helped to improve the country's arsenal of ballistic missiles and space launchers, and as a teacher, he educated the first generation of aerospace engineers. This book elevates Zucrow and the central role he played in getting the United States to space.

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos

Perez-Montenegro, Luca Massotti, 2018-03-08 *Spacecraft Dynamics and Control The Embedded Model Control Approach* provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code
