Handbook of Port Machinery Dexin Tao, Yunfu Yan, Dashan Dong, Dewen Zhang, 2024-03-19 The CCMS Handbook of Port Machinery is an extensive reference guide intended to meet the needs of port handling machinery users and port planning and design institutes with regard to equipment selection equipment application and maintenance management It comprehensively and systematically introduces readers to the characteristics classification structure working principles main technical performance parameters corresponding technical standards and matters requiring special attention in equipment selection for typical port handling machinery The handbook supplements relevant handbooks on port machinery product design specifications and provides essential technical guidance to help users fully understand and correctly select port machinery and equipment At the same time it offers a valuable resource for technical personnel university teachers and students who are engaged in port planning and design handling process design port machinery product design port machinery use and maintenance A comprehensive guide to port handling machinery it reflects the current state of development and application status of port machinery in China

Probabilistic modeling for sensor fusion with inertial measurements Manon Kok, 2016-12-15 In recent years inertial sensors have undergone major developments The quality of their measurements has improved while their cost has decreased leading to an increase in availability They can be found in stand alone sensor units so called inertial measurement units but are nowadays also present in for instance any modern smartphone in Wii controllers and in virtual reality headsets The term inertial sensor refers to the combination of accelerometers and gyroscopes These measure the external specific force and the angular velocity respectively Integration of their measurements provides information about the sensor's position and orientation However the position and orientation estimates obtained by simple integration suffer from drift and are therefore only accurate on a short time scale In order to improve these estimates we combine the inertial sensors with additional sensors and models To combine these different sources of information also called sensor fusion we make use of probabilistic models to take the uncertainty of the different sources of information into account The first contribution of this thesis is a tutorial paper that describes the signal processing foundations underlying position and orientation estimation using inertial sensors In a second contribution we use data from multiple inertial sensors placed on the human body to estimate the body's pose A biomechanical model encodes the knowledge about how the different body segments are connected to each other We also show how the structure inherent to this problem can be exploited This opens up for processing long data sets and for solving the problem in a distributed manner Inertial sensors can also be combined with time of arrival measurements from an ultrawideband UWB system We focus both on calibration of the UWB setup and on sensor fusion of the inertial and UWB measurements The UWB measurements are modeled by a tailored heavy tailed asymmetric distribution This distribution naturally handles the possibility of measurement delays due to multipath and non line of sight conditions while not allowing for the possibility of measurements arriving early i

e traveling faster than the speed of light Finally inertial sensors can be combined with magnetometers We derive an algorithm that can calibrate a magnetometer for the presence of metallic objects attached to the sensor Furthermore the presence of metallic objects in the environment can be exploited by using them as a source of position information We present a method to build maps of the indoor magnetic field and experimentally show that if a map of the magnetic field is available accurate position estimates can be obtained by combining inertial and magnetometer measurements

Data Analytics for Smart Cities Amir Alavi,William G. Buttler,2018-10-26 The development of smart cities is one of the most important challenges over the next few decades Governments and companies are leveraging billions of dollars in public and private funds for smart cities Next generation smart cities are heavily dependent on distributed smart sensing systems and devices to monitor the urban infrastructure The smart sensor networks serve as autonomous intelligent nodes to measure a variety of physical or environmental parameters They should react in time establish automated control and collect information for intelligent decision making In this context one of the major tasks is to develop advanced frameworks for the interpretation of the huge amount of information provided by the emerging sensing and monitoring systems Data Analytics for Smart Cities brings together some of the most exciting new developments in the area of integrating advanced data analytics systems into smart cities along with complementary technological paradigms such as cloud computing and Internet of Things IoT The book serves as a reference for researchers and engineers in domains of advanced computation optimization and data mining for smart civil infrastructure condition assessment dynamic visualization intelligent transportation systems ITS cyber physical systems and smart construction technologies The chapters are presented in a hands on manner to facilitate researchers in tackling applications Arguably data analytics technologies play a key role in tackling the challenge of creating smart cities Data analytics applications involve collecting integrating and preparing time and space dependent data produced by sensors complex engineered systems and physical assets followed by developing and testing analytical models to verify the accuracy of results This book covers this multidisciplinary field and examines multiple paradigms such as machine learning pattern recognition statistics intelligent databases knowledge acquisition data visualization high performance computing and expert systems The book explores new territory by discussing the cutting edge concept of Big Data analytics for interpreting
