Sea-Level Rise for the Coasts of California, Oregon, and Washington National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Board on Earth Sciences and Resources,Committee on Sea Level Rise in California, Oregon, and Washington,2012-12-06 Tide gauges show that global sea level has risen about 7 inches during the 20th century and recent satellite data show that the rate of sea level rise is accelerating As Earth warms sea levels are rising mainly because ocean water expands as it warms and water from melting glaciers and ice sheets is flowing into the ocean Sea level rise poses enormous risks to the valuable infrastructure development and wetlands that line much of the 1 600 mile shoreline of California Oregon and Washington As those states seek to incorporate projections of sea level rise into coastal planning they asked the National Research Council to make independent projections of sea level rise along their coasts for the years 2030 2050 and 2100 taking into account regional factors that affect sea level Sea Level Rise for the Coasts of California Oregon and Washington Past Present and Future explains that sea level along the U S west coast is affected by a number of factors These include climate patterns such as the El Ni o effects from the melting of modern and ancient ice sheets and geologic processes such as plate tectonics Regional projections for California Oregon and Washington show a sharp distinction at Cape Mendocino in northern California South of that point sea level rise is expected to be very close to global projections However projections are lower north of Cape Mendocino because the land is being pushed upward as the ocean plate moves under the continental plate along the Cascadia Subduction Zone However an earthquake magnitude 8 or larger which occurs in the region every few hundred to 1 000 years would cause the land to drop and sea level to suddenly rise
