Unlawful Advances Celene Reynolds, 2025-08-19 The remarkable story of the women who defined sexual harassment as unlawful sex discrimination under Title IX When the US Congress enacted Title IX of the Education Amendments of 1972 no one expected it to become a prominent tool for confronting sexual harassment in schools Title IX is the civil rights law that prohibits education programs from discriminating on the basis of sex At the time however the term sexual harassment was not yet in use this kind of misconduct was simply accepted as part of life for girls and women at schools and universities In Unlawful Advances Celene Reynolds shows how the women claiming protection under Title IX made sexual harassment into a form of sex discrimination barred by the law Working together feminist students and lawyers fundamentally changed the right to equal opportunity in education and schools obligations to ensure it Drawing on meticulously documented case studies Reynolds explains how Title IX was applied to sexual harassment linking the actions of feminists at Cornell Yale and Berkeley Through analyses of key lawsuits and an original dataset of federal Title IX complaints she traces the evolution of sexual harassment policy in education from the early applications at elite universities to the growing sexual harassment bureaucracies on campuses today and how the work of these feminists has forever shaped the law university governance and gender relations on campus Reynolds argues that our political and interpretive struggle over this application of Title IX is far from finished Her account illuminates this ongoing effort as well as the more general process by which citizens can transform not only the laws that govern us but also the very meaning of equality under American law

Sideris, 2013-10-17 This book is a mathematically rigorous introduction to the beautiful subject of ordinary differential equations for beginning graduate or advanced undergraduate students Students should have a solid background in analysis and linear algebra The presentation emphasizes commonly used techniques without necessarily striving for completeness or for the treatment of a large number of topics The first half of the book is devoted to the development of the basic theory linear systems existence and uniqueness of solutions to the initial value problem flows

stability and smooth dependence of solutions upon initial conditions and parameters Much of this theory also serves as the paradigm for evolutionary partial differential equations The second half of the book is devoted to geometric theory topological conjugacy invariant manifolds existence and stability of periodic solutions bifurcations normal forms and the existence of transverse homoclinic points and their link to chaotic dynamics A common thread throughout the second part is the use of the implicit function theorem in Banach space Chapter 5 devoted to this topic the serves as the bridge between the two halves of the book

Meta-Learning in Decision Tree Induction Krzysztof Grąbczewski,2013-09-11 The book focuses on different variants of decision tree induction but also describes the meta learning approach in general which is applicable to other types of machine learning algorithms The book discusses different variants of decision tree induction and represents a useful source of information to readers wishing to review some of the techniques used in decision tree learning as well as different ensemble methods that involve decision trees It is shown that the knowledge of different components used within decision tree learning needs to be systematized to enable the system to generate and evaluate different variants of machine learning algorithms with the aim of identifying the top most performers or potentially the best one A unified view of decision tree learning enables to emulate different decision tree algorithms simply by setting certain parameters As meta learning requires running many different processes with the aim of obtaining performance results a detailed description of the experimental methodology and evaluation framework is provided Meta learning is discussed in great detail in the second half of the book The exposition starts by presenting a comprehensive review of many meta learning approaches explored in the past

described in literature including for instance approaches that provide a ranking of algorithms The approach described can be related to other work that exploits planning whose aim is to construct data mining workflows The book stimulates interchange of ideas between different albeit related approaches *Offshore Site Investigation and Foundation Behaviour* D.A.
