Britain Gareth Millward,2019-01-29 This electronic version has been made available under a Creative Commons BY NC ND
 open access license This book is available as an open access ebook under a CC BY NC ND licence Vaccinating Britain shows
 how the British public has played a central role in the development of vaccination policy since the Second World War It
 explores the relationship between the public and public health through five key vaccines diphtheria smallpox poliomyelitis
 whooping cough and measles mumps rubella MMR It reveals that while the British public has embraced vaccination as a safe
 effective and cost efficient form of preventative medicine demand for vaccination and trust in the authorities that provide it
 has ebbed and flowed according to historical circumstances It is the first book to offer a long term perspective on vaccination
 across different vaccine types This history provides context for students and researchers interested in present day
 controversies surrounding public health immunisation programmes Historians of the post war British welfare state will find
 valuable insight into changing public attitudes towards institutions of government and vice versa Science Teaching in
Schools Great Britain: Parliament: House of Lords: Science and Technology Committee,2006-11-05 The Committee s report
 examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of
 science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and
 retention of teachers the quality of teaching methods and the role of continuing professional development The Committee
 finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific
 literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond
 It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an
 age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system
 for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded
 education and are not made to over specialise before they are able to see the merits of studying science and mathematics
 Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the
 quality of careers advice in schools and the importance of practical science in schools **Equivalence** Amanda L.
 Golbeck,2017-04-28 Equivalence Elizabeth L Scott at Berkeley is the compelling story of one pioneering statistician s
 relentless twenty year effort to promote the status of women in academe and science Part biography and part microhistory

the book provides the context and background to understand Scott's masterfulness at using statistics to help solve societal problems. In addition to being one of the first researchers to work at the interface of astronomy and statistics and an early practitioner of statistics using high speed computers, Scott worked on an impressively broad range of questions in science from whether cloud seeding actually works to whether ozone depletion causes skin cancer. Later in her career, Scott became swept up in the academic women's movement. She used her well-developed scientific research skills together with the advocacy skills she had honed in such activities as raising funds for Martin Luther King Jr and keeping Free Speech Movement students out of jail toward policy making that would improve the condition of the academic workforce for women. The book invites the reader into Scott's universe, a window of inspiration made possible by the fact that she saved and dated every piece of paper that came across her desk.

Satellite Gravity and the Geosphere National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Earth Gravity from Space, 1997-09-02. For the past three decades it has been possible to measure the earth's static gravity from satellites. Such measurements have been used to address many important scientific problems including the earth's internal structure and geologically slow processes like mantle convection. In principle it is possible to resolve the time-varying component of the gravity field by improving the accuracy of satellite gravity measurements. These temporal variations are caused by dynamic processes that change the mass distribution in the earth's oceans and atmosphere. Acquisition of improved time-varying gravity data would open a new class of important scientific problems to analysis including crustal motions associated with earthquakes and changes in groundwater levels, ice dynamics, sea level changes and atmospheric and oceanic circulation patterns. This book evaluates the potential for using satellite technologies to measure the time-varying component of the gravity field and assess the utility of these data for addressing problems of interest to the earth sciences, natural hazards and resource communities.

Death Dust William C. Potter, Sarah Bidgood, Samuel Meyer, Hanna Nottle, 2023-12-19. The postwar period saw increased interest in the idea of relatively easy-to-manufacture but

devastatingly lethal radiological munitions whose use would not discriminate between civilian and military targets *Death Dust* explores the largely unknown history of the development of radiological weapons RW weapons designed to disperse radioactive material without a nuclear detonation through a series of comparative case studies across the United States the Soviet Union the United Kingdom Iraq and Egypt The authors illuminate the historical drivers of and impediments to radiological weapons innovation They also examine how new dire geopolitical events such as the war in Ukraine could encourage other states to pursue RW and analyze the impact of the spread of such weapons on nuclear deterrence and the nonproliferation regime *Death Dust* presents practical necessary steps to reduce the likelihood of a resurgence of interest in and pursuit of radiological weapons by state actors *Frontiers in Seafloor Geodesy* Ryota Hino, Keiichi Tadokoro, Laura Wallace, 2021-11-01 *Physical Hydrology* S. Lawrence Dingman, 2015-01-09 For twenty years Lawrence Dingman's well written comprehensive *Physical Hydrology* has set standards for balancing theoretical depth and breadth of applications Rich in substance and written to meet the needs of future researchers and experts in the field Dingman treats hydrology as a distinct geoscience that is continually expanding to deal with large scale changes in land use and climate The third edition provides a solid conceptual basis of the subject and introduces the quantitative relations involved in answering scientific and management questions about water resources The text is organized around three principal themes the basic concepts underlying the science of hydrology the exchange of water and energy between the atmosphere and the earth's surface and the land phase of the hydrologic cycle Dingman supplies the basic physical principles necessary for developing a sound instructive sense of the way in which water moves on and through the land in addition he describes the assumptions behind each analytical approach and identifies the limitations of each **An Almanac of Contemporary and Comparative Judicial Restatements (ACCJR Supp. i Private Law)** Oshisanya, 'lai Oshitokunbo, 2020-01-02 Private law
