Design for the Changing Educational Landscape Andrew Harrison, Les Hutton, 2013-10-15 The whole landscape of space use is undergoing a radical transformation In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide the rise of distributed space In the learning environment the social political economic and technological changes responsible for this shift have been further compounded by constantly developing theories of learning and teaching and a wide acceptance of the importance of learning as the core of the community resulting in the blending of all aspects of learning into one seamless experience This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces real and virtual that now accommodate the experience of learning and provide pointers towards the creation and design of learning centred communities Part 1 looks at the entire learning universe as it now stands tracks the way in which its constituent parts came to occupy their role assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform It shows that what is required is innovation within the spaces and integration between them Part 2 finds many examples of innovation in evidence across the world in schools the higher and further education campus and in business and cultural spaces but an almost total absence of integration Part 3 offers a model that redefines the learning landscape in terms of learning outcomes mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome at the most appropriate scale By encouraging stakeholders to creating an events based rather than space based identity the book hopes to point the way to a fully integrated learning landscape a learning community The Physical City Neil L. Complementarity Beyond Physics (1928-1962) D. Favrholt, 2013-10-22 This volume is divided into five parts The title of the volume refers primarily to part I which is by far the largest and comprises papers discussing the fundamental questions of biology and related psychological and philosophical problems Following the reproduction of papers brought to publication by Bohr there is a separate Appendix to Part I including some of Bohr's most interesting and substantive unpublished contributions in this area The papers in Part I span the last thirty years of Bohr's life and display his great interest in biological problems and his unremitting efforts to show that biology cannot be reduced to physics and chemistry Part II contains articles of a more general cultural interest Some of these show that Bohr regarded the complementary perspective to be of value also outside the scientific sphere Part III contains the articles Bohr wrote about the great Danish philosopher Harald Hffding These short papers are presented in a section on their own because of the continuing discussion in the history of science about Hffding's possible influence on Bohr's work in physics and his whole scientific approach Part IV comprises articles illuminating the history of 20th century physics Bohr had great veneration for his predecessors and teachers and he prepared these articles with great care Part V contains correspondence relating to the material in Parts I through IV As in previous volumes an inventory of relevant unpublished manuscripts held at the Niels Bohr Archive constitutes an appendix to the whole volume Applications of Quantum Mechanical Techniques to Areas Outside of Quantum Mechanics. 2nd Edition Emmanuel Haven, Andrei Khrennikov, 2019-11-14 This book deals with applications of quantum mechanical techniques to areas outside of quantum mechanics so called quantum like modeling Research in this area has grown over the last 15 years But even already more than 50 years ago the interaction between Physics Nobelist

Pauli and the psychologist Carl Jung in the 1950 s on seeking to find analogous uses of the complementarity principle from quantum mechanics in psychology needs noting This book does NOT want to advance that society is quantum mechanical The macroscopic world is manifestly not quantum mechanical But this rules not out that one can use concepts and the mathematical apparatus from quantum physics in a macroscopic environment A mainstay ingredient of quantum mechanics is quantum probability and this tool has been proven to be useful in the mathematical modelling of decision making In the most basic experiment of quantum physics the double slit experiment it is known from the works of A Khrennikov that the law of total probability is violated It is now well documented that several decision making paradoxes in psychology and economics such as the Ellsberg paradox do exhibit this violation of the law of total probability When data is collected with experiments which test non rational decision making behaviour one can observe that such data often exhibits a complex non commutative structure which may be even more complex than if one considers the structure allied to the basic two slit experiment The community exploring quantum like models has tried to address how quantum probability can help in better explaining those paradoxes Research has now been published in very high standing journals on resolving some of the paradoxes with the mathematics of quantum physics The aim of this book is to collect the contributions of world s leading experts in quantum like modeling in decision making psychology cognition economics and finance
